*Environmental Law and the Ecosystem Approach* Froukje Maria Platjouw, 2016-05-05 The ecosystem approach embodies a concept of the environment which emphasizes the integrated components of nature as complex adaptive systems This book examines the relationship between the architecture and design of environmental law and the implementation of the ecosystem approach as a means to maintain ecological integrity The main issue addressed is in which manner and to what extent does fragmentation and administrative discretion in environmental law impede the implementation of an ecosystem approach This is explored through analysis of several questions what is an ecosystem approach and how could it be implemented how can economic evaluation of ecosystem services contribute to the debate to what extent is environmental law fragmented and how does this affect the implementation of the ecosystem approach to what extent does environmental law contain administrative discretion and how does this affect the implementation of the ecosystem approach is there a need for greater consistency coherence and a stronger rule of law in environmental law in light of the ecosystem approach The main focus is on Europe with additional international comparisons where appropriate The book concludes by providing a normative portrayal of future environmental law as protective systemic and predictable

The Ecosystem Approach to Fisheries S. M. Garcia, 2003-01-01 Ecosystems are complex and dynamic natural units that produce goods and services beyond those of benefit to fisheries Because fisheries have a direct impact on the ecosystem which is also impacted by other human activities they need to be managed in an ecosystem context The meaning of the terms ecosystem management ecosystem based management ecosystem approach to fisheries EAF etc are still not universally defined and progressively evolving The justification of EAF is evident in the characteristics of an exploited ecosystem and the impacts resulting from fisheries and other activities The rich

set of international agreements of relevance to EAF contains a large number of principles and conceptual objectives Both provide a fundamental guidance and a significant challenge for the implementation of EAF The available international instruments also provide the institutional foundations for EAF The FAO Code of Conduct for Responsible Fisheries is particularly important in this respect and contains provisions for practically all aspects of the approach One major difficulty in defining EAF lies precisely in turning the available concepts and principles into operational objectives from which an EAF management plan would more easily be developed The paper discusses these together with the types of action needed to achieve them Experience in EAF implementation is still limited but some issues are already apparent e g in added complexity insufficient capacity slow implementation need for a pragmatic approach etc It is argued in conclusion that the future of EAF and fisheries depends on the way in which the two fundamental concepts of fisheries management and ecosystem management and their respective stakeholders will join efforts or collide

**The 'Ecosystem Approach' in International Environmental Law** Vito De Lucia,2019-03-28 The ecosystem approach broadly understood as a legal and governance strategy for integrated environmental and biodiversity management has been adopted within a wide variety of international environmental legal regimes and provides a narrative a policy approach and in some cases legally binding obligations for States to implement what has been called a new paradigm of environmental management In this last respect the ecosystem approach is also often considered to offer an opportunity to move beyond the outdated anthropocentric framework underpinning much of international environmental law thus helping re think law in the Anthropocene Against this background this book addresses the question of whether the ecosystem approach represents a paradigm shift in international environmental law and governance or whether it is in conceptual and operative continuity with legal modernity This central question is explored through a combined genealogical and biopolitical framework which reveals how the ecosystem approach is the result of multiple contingencies and contestations and of the interplay of divergent and sometimes irreconcilable ideological projects The ecosystem approach this books shows does not have a univocal identity and must be understood as both signalling the potential for a decisive shift in the philosophical orientation of law and the operationalisation of a biopolitical framework of control that is in continuity with and even intensifies the eco destructive tendencies of legal modernity It is however in revealing this disjunction that the book opens up the possibility of moving beyond the already tired assessment of environmental law through the binary of anthropocentrism and ecocentrism
