Ecology An Evolutionary Approach:

Behavioural Ecology John R. Krebs, Nicholas B. Davies, 2009-07-17 Intended for graduate and upper level undergraduate courses in behavioural ecology where students are already familiar with the basic ideas this book continues to define the subject. A completely new set of contributions has been brought together once more to take account of the many exciting new developments in the field. Each chapter presents a balanced view of the subject integrating a clear exposition of the theory with a critical discussion of how predictions have been tested by experiments and comparative studies. In addition the book points to unreconciled issues and possible future developments. Edited by two of the most highly regarded experts in the field this new volume contains contributions from an international authorship and continues the tradition of clarity and accessibility established by the three previous editions. The latest edition of a classic in behavioural ecology. Divided into three sections: Mechanisms and Individual Behaviour, From Individual Behaviour to Social Systems and Life Histories, Phylogenies and Populations. Contributions from the world's leading researchers.

Microbial Ecology J. Vaughn McArthur, 2006-02-01 Based on the thesis that insights into both evolution and ecology can be obtained through the study of microorganisms. Microbial Ecology examines microbiology through the lens of evolutionary ecology. Measured from a microbial perspective this text covers such topics as optimal foraging, genome reduction, novel evolutionary mechanisms, bacterial speciation, and r and K selection. Numerous aspects of microbial existence are also discussed and include species competition, predation, parasitism, mutualism, microbial communication through quorum sensing and other. The result is a context for understanding microbes in nature and a framework for microbiologists working in industry, medicine and the environment. Applies evolutionary ecological concepts to microbes. Addresses individual population and community ecology. Presents species concepts and offers insights on the origin of life and modern microbial ecology. Examines topics such as species interactions, nutrient cycling, quorum sensing and cheating.

Plant Animal Interactions Carlos M. Herrera, Olle Pellmyr, 2009-04-13 Interactions between plants and animals are incredibly diverse and complex and span terrestrial, atmospheric and aquatic environments. The last decade has seen the emergence of a vast quantity of data on the subject and there is now a perceived need among both teachers and undergraduate students for a new textbook that incorporates the numerous recent advances made in the field. The book is intended for use by advanced level undergraduate and beginning graduate students taking related courses in wider ecology degree programmes. Very few books cover this subject and those that do are out of date.

Geocology: An Evolutionary Approach Richard Huggett, 2002-09-11 Animals, plants and soils interact with one another with the terrestrial spheres and with the rest of the Cosmos. On land this rich interaction creates landscape systems or geoecosystems. Geocology investigates the structure and function of geoecosystems, their components and their environment. The author develops a simple dynamic systems model, the Brash equation, to form the conceptual framework for

the book suggesting an ecological and evolutionary approach Exploring internal of ecological interactions between geoecosystems and their near surface environments the atmosphere hydrosphere toposphere and lithosphere and external influences both geological and cosmic Geoecology presents geoecosystems as dynamic entities constantly responding to changes within themselves and their surroundings An evolutionary view emerges of geoeological systems and the animals plants and soils comprising them providing a new way of thinking for the whole environmental complex and the rich web of interdependencies contained therein Biogeography C. Barry Cox, Peter D. Moore, 2010-05-10 Biologists searching for a resource that explores all of the exciting changes that have occurred recently in the field will turn to this eighth edition It offers insight into the multidisciplinary nature of the field presenting a sound historical base up to date coverage and a look at the latest controversies The authors evaluate conflicting theories and provide a reasoned judgment as to which is preferable In a new chapter the authors examine marine biogeography so that biologists can compare and analyze the data patterns and problems arising from continental marine and island biogeography **Microbial Ecology: An Evolutionary Approach (Hb)** McArthur, 2008-01-01 *Geoecology* Richard John Huggett, 1995 *Insect Chemical Ecology* Bernard D. Roitberg, Murray B. Isman, 1992-08-31 *Insect Chemical Ecology* provides a comprehensive view of how natural selection acts upon interacting organisms and how particular physical and biological properties of chemical compounds act as constraints upon which natural selection may act Individual chapters raise specific questions as to the nature of these interactions The first part contains reviews on antagonistic and mutualistic chemical interactions the raw materials of chemical evolution the economics of offensive and defensive chemicals and neurobiology The second part discusses particular problems such as the evolution of resistance insect pollination learning pheromones sequestration of semiochemicals the role of microorganisms sex attractants the evolution of host races and biotypes and the role of semiochemicals and the evolution of sociality of insects The last chapter discusses the role of chemical based pest management programs in an ecological and evolutionary framework **Geoecology** Richard J. Huggett, 1995 Animals plants and soils interact with one another They also interact with the terrestrial spheres the atmosphere hydrosphere toposphere and lithosphere and with the rest of the Cosmos On land this rich interaction creates landscape systems or geoecosystems Geoecology investigates the structure and function of geoecosystems A new evolutionary view of geoeological systems and the animals plants and soils comprising them emerges geoecosystems are seen as dynamic entities organized on a hierarchical basis that perpetually respond to changes within themselves and in their surroundings Presenting a new ecological and evolutionary approach to the study of geoeological change Geoecology will interest a wide range of environmental scientists geographers ecologists and pedologists Physiological Ecology of Animals R. Breidbach, Wolfram Kutsch, 1995 In this volume outstanding specialists review the state of the art in nervous system research for all main

invertebrate groups They provide a comprehensive up to date analysis important for everyone working on neuronal aspects of single groups as well as taking into account the phylogenesis of invertebrates The articles report on recently gained knowledge about diversification in the invertebrate nervous systems and demonstrate the analytical power of a comparative approach Novel techniques in molecular and developmental biology are creating new perspectives that point toward a theoretical foundation for a modern organismic biology The comparative approach as documented here will engage the interest of anyone challenged by the problem of structural diversification in biology *Ecology* David T. Environmentalism: An Evolutionary Approach Douglas Spieles,2017-12-04 The premise of this book is that our environmental dilemmas are products of biological and sociocultural evolution and that through an understanding of evolution we can reframe debates of thought and action The purpose is to explain the wide variety of environmental worldviews their origins commonalities points of contention and their implications for the modern environmental movement In three parts covering the origins evolution and future of environmentalism it offers instructors and students a framework on which to map theory case studies and classical literature It is shown that environmentalism can be described in terms of six human values utility stability equity beauty sanctity and morality and that these are deeply rooted in our biological and cultural origins In building this case the book draws upon ecology philosophy psychology history biology economics spirituality and aesthetics but rather than consider these all independently it integrates them to craft a mosaic narrative of our species and its home From our evolutionary origins a story emerges it is the story of humankind how we have come to threaten our own existence and why we seem to have such difficulty in acting together to ensure our common future Understanding our environmental problems in evolutionary terms gives us a way forward It suggests an environmentalism in which material views of human life include spirituality in which our anthropocentric behaviors incorporate ecological function and in which environmental problems are addressed by the intentional relation of humans to the nonhuman world and to one another Aimed at students taking courses in environmental studies the book brings clarity to a complex and at times confusing array of ideas and concepts of environmentalism **Evolutionary Theory and Processes: Modern**

Perspectives Solomon Wasser,1998-12-31 This volume presents some of the most recent dramatic results of molecular genomic and organismal evolutionary processes It represents analyses experiments observations reviews discussions and forecasts of evolutionary theory comprising both novel methods and results reanalyzed and reviewed data sets based on comparative experimental and theoretical studies utilizing model organisms across phylogeny including bacteria fungi plants animals and humans It elucidates the revolution in molecular biology that ushered in our understanding of the evolutionary process over time and space The topics discussed include major problems of evolutionary theory concerning origins phylogeny relative importance of evolutionary forces structure and function adaptation and speciation in space and time in changing and stressful environments A major emerging generalization is the nonrandomness of genome structure

highlighting the importance of natural selection as a major organizing evolutionary force not only at the phenotypic level but most importantly at the interlinked genotypic molecular level The integration between the molecular *The Handbook of Evolutionary Psychology, Volume 1* David M. Buss, 2015-09-29 The indispensable reference tool for the groundbreaking science of evolutionary psychology Why is the mind designed the way it is How does input from the environment interact with the mind to produce behavior These are the big unanswered questions that the field of evolutionary psychology seeks to explore The Handbook of Evolutionary Psychology is the seminal work in this vibrant quickly developing new discipline In this thorough revision and expansion luminaries in the field provide an in depth exploration of the foundations of evolutionary psychology and explain the new empirical discoveries and theoretical developments that continue at a breathtaking pace Evolutionary psychologists posit that the mind has a specialized and complex structure just as the body has a specialized and complex structure From this important theoretical concept arises the vast array of possibilities that are at the core of the field which seeks to examine such traits as perception language and memory from an evolutionary perspective This examination is intended to determine the human psychological traits that are the products of sexual and natural selection and as such to chart and understand human nature Join the discussion of the big questions addressed by the burgeoning field of evolutionary psychology Explore the foundations of evolutionary psychology from theory and methods to the thoughts of EP critics Discover the psychology of human survival mating parenting cooperation and conflict culture and more Identify how evolutionary psychology is interwoven with other academic subjects and traditional psychological disciplines The Handbook of Evolutionary Psychology is the definitive guide for every psychologist and student interested in keeping abreast of new ideas in this quickly developing field **Theoretical Approaches to Biological Control** Bradford A.

Hawkins, Howard V. Cornell, 2008-10-14 Biological control is the suppression of pest populations using predators parasitoids and pathogens Historically biological control has largely been on a trial and error basis and has failed more often than it has succeeded However by developing theories based upon fundamental population principles and the biological characteristics of the pest and agent we can gain a much better understanding of when and how to use biological control This book gathers together recent theoretical developments and provides a balanced guide to the important issues that need to be considered in applying ecological theory to biological control It will be a source of productive and stimulating thought for all those interested in pest management theoretical ecology and population biology
