Economic Theory And Social Institutions:

The Economic Theory of Social Institutions A. Schotter, 1981-03-31 This book uses game theory to analyse the creation evolution and function of economic and social institutions The author illustrates his analysis by describing the organic or unplanned evolution of institutions such as the conventions of war the use of money property rights and oligopolistic pricing conventions Professor Schotter begins by linking his work with the ideas of the philosophers Rawls Nozick and Lewis Institutions are regarded as regularities in the behaviour of social agents which the agents themselves tacitly create to solve a wide variety of recurrent problems The repetitive nature of the problems permits them to be described as a recurrent game or supergame The agents use these regularities as informational devices to supplement the information contained in competitive prices The final chapter explores the applicability of this theory first by relating it to previous work on the theory of teams hierarchies and non maximizing decision theory and then by using it to provide a new approach to a variety of questions both within and outside economics

Principles of Exchange and Power Nikolaus Horster, 1997 The General Equilibrium Theory as one of the fundamental theoretical concepts in economics is analyzed and reformulated by using the structuralist theory concept Subsequently the basic principle of the economic theory exchange is then compared to the basic principle of the Theory of Social Institutions power The Theory of Social Institutions is a power based theory in contrast to most sociological theories which take a game theoretic approach and is shown to be well suited to explain all the phenomena a General Equilibrium Theory has to handle Furthermore several weaknesses in the reasoning of theoretical economics are clearly identified The result is a simpler more straightforward approach to the various problems underlying the analysis of modern economics

Social Institutions Karl-Dieter Opp, 2018-04-27 This is the first book to present a synthesis of rational choice theory and sociological perspectives for the analysis of social institutions The origin of social institutions is an old concern in social theory Currently it has re emerged as one of the most intensely debated issues in social science Among economists and

rational choice theorists there is growing awareness that most if not all of the social outcomes that are of interest to explain are at least partly a function of institutional constraints Yet the role of institutions is negligible both in general equilibrium theory and in most neoclassical economic models There is a burgeoning substantive interest in institutions ranging from social movements to formal organizations to states and even international regimes Rational choice theorists have made great strides in elucidating the effects of institutions on a variety of social outcomes but they have paid insufficient attention to the social dynamics that lead to the emergence of these institutions Typically these institutions have been assumed to be a given rather than considered as outcomes requiring explanation in their own right Sociological theorists in contrast have long appreciated the role of social structural constraints in the determination of outcomes but have neglected the role of individual agents Michael Hechter is professor emeritus in the department of Sociology at the University of Washington He is the author of numerous books He became an Elected Fellow to the American Academy of Arts and Sciences in 2004 and has been featured in Who's Who He is also currently on editorial boards for a numerous amount of journals Karl Dieter Opp is professor of sociology at Univesitat Leipzig He has been a Fellow of the European Academy of Sociology since 1999 and has been member of the Council and Treasurer since 2000 He is also current on the advisory board for the magazine Mind and Society Reinhard Wippler is professor of theoretical sociology at the University of Utrecht and scientific director of the Interuniversity Center for Sociological Theory and Methodology

Institutions, Behaviour and Economic Theory

Heinrich Bortis, 1997 This book is about the conceptual foundations of an intermediate way between liberalism and socialism From a standpoint of economic theory this middle way is conceived of as a synthesis of classical Ricardian and Keynesian political economy While the former deals with proportions between individuals or collectives and society in tackling the problems of distribution and value on the basis of the surplus principle the latter is concerned with the scale of economic activity as explained by the principle of effective demand Political economy pictures the economic aspects of the functioning of the institutional system within which the behaviour of individuals is embedded The economy considered is primarily neither a market nor a planned economy but rather a monetary production economy To establish an alternative to liberalism and socialism requires setting up a system of the social sciences In this work suggestions are made for linking political economy with other social sciences i.e. sociology law and politics in the traditional sense thus establishing the unity of the social sciences In a Keynesian vein the social sciences are conceived of as moral sciences a view which gives rise to a specific philosophy of history To complete the picture issues of method associated with the theory of knowledge in the social sciences and the problem of linking theory with historical reality are also covered

Economics Social Institutions K. Brunner, 2012-12-06 The productive work of widely distributed academic research has contributed substantially over the postwar period to important advances in our understanding It has also offered a clearer recognition of many unresolved problems Nevertheless the progress achieved over the last decades exhibited by the systematic application of theory to actual issues and observable problems could not overcome a pervasive sense of dissatisfaction Some academic endeavors pursued within a traditional range of economic analysis have appeared increasingly remote from broad social issues motivating the social and intellectual unrest experienced in recent years Conditioned by the traditional use of economic analysis many have naturally concluded that the most relevant social issues agitating our times are beyond the reach of economics Purist advocates of a traditional view thus condemn any extension of economic analysis to social issues as an escape into ideology Others argue the need for an interdisciplinary approach involving sociology social psychology or anthropology as necessary strands in a useful understanding of social institutional and human problems of contemporary societies We note here in particular the subtle attraction inherent in Marxian thought It appears to offer a unified approach with a coherent interpretation to all matters and aspects of human society including even nature

Knowledge, Social Institutions and the Division of Labour Pier Luigi Porta, Roberto Scazzieri, Andrew S. Skinner, 2001-01-01 The complex interplay of the formation and communication of knowledge the structure of social interaction and the evolution of the division of labour is here skilfully explored in a broad historical philosophical and analytical framework by a truly international meeting of minds enabling an encounter with great thinkers past and present commencing with Hume and Smith A heady and unusual elixir finely distilled and to be slowly enjoyed if its sophisticated benefits are to be fully gathered by the reader Peter Groenewegen University of Sydney Australia Knowledge Social Institutions and the Division of Labour gives rise to a new and richer institutional analysis of the economy centred around the analysis of language the division of labour and social knowledge It is in this perspective that the economic analysis of institutions comes to be associated with the study of civil society or with the broad framework of communication and coordination behind the interaction of individuals in economic and non economic spheres This fascinating book is divided into three parts beginning with the issue of the development of science as an aspect of the division of labour starting from methodological problems on the communication of scientific knowledge The volume goes on to explore issues on the moral

bases of social interaction and more particularly of commercial society before ending with in depth analyses of questions on the division of labour social institutions and the diffusion of knowledge in society

Complex Economics Alan Kirman, 2010-09-13 The economic crisis is also a crisis for economic theory Most analyses of the evolution of the crisis invoke three themes contagion networks and trust yet none of these play a major role in standard macroeconomic models What is needed is a theory in which these aspects are central The direct interaction between individuals firms and banks does not simply produce imperfections in the functioning of the economy but is the very basis of the functioning of a modern economy This book suggests a way of analysing the economy which takes this point of view The economy should be considered as a complex adaptive system in which the agents constantly react to influence and are influenced by the other individuals in the economy In such systems which are familiar from statistical physics and biology for example the behaviour of the aggregate cannot be deduced from the behaviour of the average or representative individual Just as the organised activity of an ants nest cannot be understood from the behaviour of a representative ant so macroeconomic phenomena should not be assimilated to those associated with the representative agent This book provides examples where this can clearly be seen The examples range from Schelling s model of segregation to contributions to public goods the evolution of buyer seller relations in fish markets to financial models based on the foraging behaviour of ants The message of the book is that coordination rather than efficiency is the central problem in economics How do the myriads of individual choices and decisions come to be coordinated How does the economy or a market self organise and how does this sometimes result in major upheavals or to use the phrase from physics phase transitions The sort of system described in this book is not in equilibrium in the standard

sense it is constantly changing and moving from state to state and its very structure is always being modified The economy is not a ship sailing on a well defined trajectory which occasionally gets knocked off course It is more like the slime described in the book emergence constantly reorganising itself so as to slide collectively in directions which are neither understood nor necessarily desired by its components
