European Energy Industry Business Strategies Atle Midttun,2001-04-20 Since the

European Union's deregulation policy for electricity and energy suppliers was implemented new strategic configurations have emerged Traditional restraints of geographical limitations on energy companies have been partly removed the diversity at national regulatory and company level means that the European scene is one of a multiplicity of strategic configurations and developments whilst also being complex and segmented This book highlights the strategic and regulatory challenges of European deregulation with its main focus being on the business strategies within the emerging deregulated electricity markets various regulatory implications which are being raised in this new climate are discussed Some of the central strategic issues facing the electricity industry in its new competitive context are explored and reviewed with classical themes debated as a prelude to the following empirical investigation of actual business strategies pursued by the electricity and energy industries The main section of this work consists of 7 national case studies of business strategies which also include one North and one South American case These were considered important inclusions as the North American companies are large investors in the European market whilst the European companies invest in the South American market The final chapter is a comparison and summary of the national patterns of market structures business strategies and regulatory styles with a brief look at some challenges to be faced in future

Managing China's Energy Sector Hongyi Lai, Malcolm Warner, 2017-10-02 Since China has now become the world's largest energy consumer its energy sector has understandably huge implications for the global economy This book examines the transformation of China's conventional and renewable energy sectors with special attention to state business relations Two studies examine the development of China's energy profile especially China's renewable energy Two others explore governmental relations with state owned enterprises SOEs and their reform Despite drastic restructuring in the late 1990s SOEs continue their oligopolistic control of the oil and gas sectors and even overshadow the stock market Three studies investigate the factors that help propel the expansion of China's conventional energy firms as well as those producing renewable energy i.e solar PV industry A study of China's solar PV industry suggests that China's governmental support for it has evolved from subsidising production a mercantile stage aimed at expanding the industry's global production and export share to subsidising the demand side aiming at expanding domestic demand and absorbing redundant manufacture capacity Another review of this industry finds that firms tend to pay heavy attention to extra firm institutional network relationships both inside and outside China and that buyer supplier networks are influenced by extra local managerial education The final chapter compares China's provinces and their embedded carbon footprints per capita in urban areas from a consumption perspective using a self organizing feature map SOFM model This book was originally published as a special issue of the Asia Pacific Business Review
