**Development and Environmental Policy in India** Kanchan Chopra, 2017-02-16 This book examines the nuances of the relationship between development and environmental conservation policy in India over the last three decades While India is taken as the focal point the study extends to an analysis of global aspects and other developing countries as and when the situation demands Understanding that development always has to take environmental issues into consideration the book undertakes critical reviews of the different ways in which this has been done The review is based on a grasp of the simultaneous developments in the theoretical understanding of the environment and ecosystems and provides pointers towards directions for possible change The motivation for the book lies in the continuing distance between theoretical knowledge of the role of the environment in particular the underlying long term links between human wellbeing and wise use of nature and its application in public policy The book also proposes that whichever theoretical cornerstone is taken as the starting point it is the ethical undertones that drive the analysis in directions that acquire meaning in terms of the quality and legitimacy of decision making It explores the relevance to policy of a variety of radical conceptual development and policy directions such as dematerialising growth the social metabolism approach and the degrowth movement Further the dilemma facing environmental policy continues to be how to simultaneously borrow from developments in and across disciplines while at the same time and at a more practical level dealing with a diversity of stakeholders **Land**

**Degradation, Desertification and Climate Change** Mark S. Reed, Lindsay C. Stringer, 2016-04-28 Although much is known about the processes and effects of land degradation and climate change little is understood about the links between them Less still is known about how these processes are likely to interact in different social ecological systems around the world or how societies might be able to adapt to this twin challenge This book identifies key vulnerabilities to the combined effects of climate change and land degradation around the world It identifies triple win adaptations that can tackle both climate change and land degradation whilst supporting biodiversity and ecosystem services The book discusses methods for monitoring effects of climate change and land degradation and adaptations to these processes It argues for better co operation and knowledge exchange so that the research land user and policy communities can work together more effectively to tackle these challenges harnessing the wisdom of crowds to assess vulnerability and adapt to climate change and land degradation whilst protecting livelihoods and biodiversity

**Sustainable Consumption** Alistair Ulph,Dale Southerton,2014-08-14 If global society is to address the many environmental and other sustainability challenges that confront us in the twenty first century such as climate change and water resources it will be necessary to make significant changes in our patterns of consumption production and distribution There is a growing realization that while changes in production and distribution are formidable the proposed solutions may not succeed unless it is possible to persuade individuals and households to change their patterns of consumption to make them more sustainable However there are significant differences in how key disciplines such as psychology neuroscience economics politics

sociology anthropology and history conceptualise consumption empirically test their theoretical predictions and use these to inform policy makers across the private public and third sectors on how to make consumption more sustainable This book contains chapters from world leading experts in these different disciplines that seek to explain the perspectives on sustainable consumption of their disciplines suggest how these might be further enriched by taking on board some of the findings from other disciplines and consider what this implies for new policies to address the key sustainability challenges outlined above The book is dedicated to Professor Sir Partha Dasgupta one of the world s leading economists who has worked across a range of topics including environmental and resource economics and development economics and throughout his career has sought to incorporate into his economic thinking ideas from a range of other disciplines

*The impact of UK overseas aid on environmental protection and climate change adaptation and mitigation* Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2011-06-29 The Environmental Audit Committee states that

the UK should only provide funding for multilateral institutions with strong environmental credentials The current scale of the World Bank's lending to fossil fuel powered energy generation is unacceptable and the Committee urges the Government to be prepared to vote against new World Bank funding for high emissions coal fired power stations The profile of climate change has increased hugely but there is far less awareness of the importance of protecting biodiversity and ecosystems The Committee believes that the Department for International Development DFID needs to publish a clear strategy on its approach to environmental issues to ensure that it gives them sufficient priority in its programmes and expenditure Every effort must be made to help emerging economies leapfrog fossil fuels and fuel their growth with clean energy instead High levels of consumption in the UK increases demand on production in poor countries which leads to degradation of their natural resources The report calls on the UK Government to ensure that economic activity in Britain does not cancel out or even reverse the positive impact that UK aid is having overseas

*Environment and Food* Colin Sage, 2011-07-07 This timely book provides a thorough introduction to the interrelationship of food and the environment Its primary purpose is to bring to our attention the multiplicity of linkages and interconnections between what we eat and how this impacts on the earth's resources Having a better idea of the consequences of our food choices might encourage us to develop more sustainable practices of production and consumption in the decades ahead Although human societies have over time brought under control a large proportion of the earth's resources for the purpose of food production we remain subject to the effective functioning of global ecosystem services The author highlights the vital importance of these services and explains why we should be concerned about the depletion of freshwater resources soil fertility decline and loss of biological diversity The book also tackles some of the enormous challenges of our era climate change to which the agri food system is both a major contributor and a vulnerable sector and the prospect of significantly higher energy prices arising from the peaking of oil and gas supplies which will reveal how dependent the food system has become upon cheap fossil fuels Such challenges are likely to have significant implications for the long term functioning of global supply chains and raise profound questions regarding the nutritional security of the world's population Taken together the book argues that a re-examination of the assumptions and practices underpinning the contemporary food system is urgently required *Environment and Food* is a highly original interdisciplinary and accessible text that will be of interest to students and the wider public genuinely interested in and concerned by the state of the world's food provisioning system It is richly illustrated with figures and makes extensive use of boxes to highlight relevant examples

**Ecosystem Crises Interactions** Merrill Singer, 2021-03-11 Explores the human impacts on environment that lead to serious ecological crises an innovative resource for students professionals and researchers alike *Ecosystem Crises Interaction Human Health and the Changing Environment* provides a timely and innovative framework for understanding how negative human activity impacts the environment and how seemingly disparate factors connect to and magnify hazardous consequences under a changing climate Presenting a coherent holistic perspective

to the subject this compelling textbook and reference examines the diverse often unexpected links that connect our complex world in context of global climate change The text illustrates how eco crisis interaction the synergistic interface of two or more environmental events or pollutants can multiply to produce harmful health effects that are greater than their additive impact This concept is highlighted through numerous real and relatable examples from the use of sediment rock in hydraulic and drinking water filtration systems to the connections between human development and crises such as deforestation emergent infectious diseases and global food insecurity Throughout the text specific examples present opportunities to consider broader questions about the extinction of species populations and ways of life Presenting a balanced investigation of the interaction of contemporary ecological dangers human behavior and health this unique resource Explores how complex interactions between global warming and anthropogenic impairments magnify the diverse ecological perils and threats facing humans and other species Discusses roadblocks to addressing environmental risk such as global elite polluters the organized denial of climate change and deliberate environmental disruption for financial gain Describes how the production and use of fossil fuels are driving a significant rise in carbon dioxide and other pollutants in the atmosphere and in the oceans Illustrates how industrial production is contributing to an array of environmental crises including fuel spills waste leakages and loss of biodiversity Examines the critical ecosystems that are at risk from interacting stressors of human origin Ecosystem Crises Interaction Human Health and the Changing Environment is an ideal textbook for advanced undergraduate and graduate students in courses including public and allied health environmental studies medical ecology medical anthropology and geo health and a valuable reference for researchers practitioners and policy makers in fields such as environmental health global and planetary health public health climate change and medical social science
