Economic Geography Of Production Trade:

The Economic Geography of Production, Trade, and Development Karsten Junius, 1999 Technological progress has led to rapidly declining costs for transport and communication trade integration via NAFTA or the EU reduces the costs of economic distance even further This can have substantial consequences for the distribution of industries between peripheral and core regions Based on recent advances in modeling economic geography this study shows the forces that influence the degree of economic concentration in the course of economic development and globalization The models are based on trade costs and economies and diseconomies of scale all of which are found to be empirically relevant factors for spatial concentration The study finds that in early stages of economic development rising GDP levels and lower trade costs increase spatial concentration while they decrease concentration in later stages so that it peaks at per capita incomes of around US 12 000 Moreover the historic degree of spatial concentration is found to have a long lasting influence in the cross section of countries under study

Regional Convergence in the European Union Juan R. Cuadrado-Roura,Marti Parellada,2013-03-14 The introduction of the single currency in the European economic space constitutes without doubt the most visible step towards monetary and economic integration in the EU Those who boosted the birth of the Common Market in 1957 dreamt that this would one day come about as a logical consequence of the integration process However things have gone much more slowly than possibly imagined although if taken in an adequate historic perspective it is undeniable that the agreements that have led to European Monetary Union signify a really formidable jump

in the process of political and economic integration in Europe This is something many doubted would ever happen but which is already a reality although still in need of a period of consolidation The most general economic consequences of the EMU have already been analysed in considerable depth Proof of this is the literature already available In general there is coincidence in affirming that the balance of the results expected is clearly positive Firstly as a result of the anticipated gains in efficiency a consequence of reduction of transaction costs associated to the previous existence of different currencies and of the elimination of exchange rate uncertainties
