Falkinham III, Karel Hruska, 2010-06-10 habitats and the overlapping of these biotopes by humans and animals contributed to the spread of mycobacteria and perhaps to their convergence to pathogenicity It was not our intention to present a compendium covering all published results but rather to issue a readable book which is illustrative and thus focused on the principle facts The increase in the number of Editors has allowed the sharing of original experiences regarding the ecology of mycobacteria published here for the first time in some cases The supplemented edition should serve as a guide to these discoveries and also contribute to an understanding of clinically significant species in human and animal medicine Borstel Germany January 2009 Jindrich Kazda Editors Comments The editors responsible for the chapters are listed under the title of each chapter Authors are listed under the titles of subchapters The references are listed as they appear in the databases Reference Manager Thomson Reuters Philadelphia as imported from Web of Science Thomson Reuters Philadelphia or PubMed Medline NLM Bethesda A few citations not indexed were cited according to the reprints or books available This principle resulted in minor differences in the titles not all reference titles are in English some references have capitalized title words not all species names are according to the contemporary nomenclature and in italics Some journals

NTM - The New Uber-Bugs Veronique Dartois,Christine Sizemore,Thomas Dick,2019-11-04 Incidence of pulmonary disease caused by nontuberculous mycobacteria NTM such as *Mycobacterium abscessus* and *M. avium* is increasing at an alarming rate surpassing tuberculosis TB in many countries Treatment durations are extremely long With low sputum conversion rates the outcomes are often disappointing Thus NTM disease resembles extremely drug resistant TB There is an urgent need for increased research on this dreadful disease For this book we brought together experts from a wide range of disciplines addressing current status gaps and needs and new developments in several NTM relevant research areas We start with the discussion of NTM disease presentations and clinical research This is followed by contributions on epidemiology antibiotic

resistance mechanisms drug discovery and development bacteriology and targets and new diagnostic tools We would like to thank the 130 authors for sharing their work and insights We hope that this collection of articles will stimulate discussions and research activities on the challenging lung disease caused by the diverse group of pathogens called NTM

Waterborne Pathogens Emmanuelle Guillot,Jean-Francois Loret,2009-11-15 Infectious diseases caused by pathogenic bacteria viruses and protozoa are the most common and widespread health risk associated with drinking water Most waterborne pathogens are introduced into drinking water supplies by human or animal faeces enteric pathogens but they can also exist naturally in water environments as indigenous aquatic micro organisms Controlling the risks related to these pathogens is a permanent challenge for the water industry In addition to the constantly evolving range of pathogens to

consider assessing and managing such risks requires the integration of information issued by a wide range of disciplines The necessary knowledge is however still sketchy and incomplete for most pathogens and research efforts are necessary to fill the remaining gaps of knowledge The purpose of this study is to provide an updated comprehensive review of current knowledge on a selection of pathogens of interest for the drinking water industry and to identify the remaining gaps of knowledge and thus the necessary research to be conducted Emphasis has been laid on the information needed to assess and manage the risks related to each of these pathogens in drinking water production and distribution The pathogens considered in this review were selected on the basis of Their recognized or highly suspected transmission by drinking water through ingestion inhalation or contact Their recognized pathogenic character for humans The severity of their health effects Each micro organism in this study is described in a summary fact sheet composed of the following items microbiology human health effects geographical distribution epidemiology ecology inactivation removal surrogates environmental detection and research needs Since much remains unknown about many aspects that are common to viruses the study features a general section on virus research needs A special section summarizes the risk management research conducted on waterborne pathogens Finally the conclusion gives an overview of the main gaps in current knowledge on waterborne pathogens Visit the IWA WaterWiki to read and share material related to this title <http://www.iwaterwiki.org/xwiki/bin/view/Articles/WaterbornePathogens>
