Economic Model Building Frank Neal, Sir Robert Minshull Shone, 1976 Textbook on the theoretics and methodology of economic model construction discusses the use of the scientific method and creative thinking in the construction of dynamic models incl Economic policy models and econometrics models etc One page bibliography **The Methodology of Economic Model Building (Routledge Revivals)** Lawrence A. Boland, 2014-05-01 The major methodological task for modern economists has been to establish the testability of models Too often however methodological assumptions can make a model virtually impossible to test even under ideal conditions yet few theorists have examined the requirements and problems of assuring testability in economics In *The Methodology of Economic Model Building* first published in 1989 Lawrence Boland presents the results of a research project that spanned more than twenty years He examines how economists have applied the philosophy of Karl Popper relating methodological debates about falsifiability to wider discussions about the truth status of models in natural and social sciences He concludes that model building in economics reflects more the methodological prescriptions of the economist Paul Samuelson than Popper's falsificationism This title will prove invaluable to both students and researchers and represents a substantial contribution to debates about the scientific status of economics A History of Macroeconometric Model-building Ronald G. Bodkin, Lawrence Robert Klein, Kanta Marwah, 1991 This major book presents for the first time an authoritative history of developments in macroeconometric modelling since the 1930s It focuses in particular on the construction of mathematical statistical models of entire economies estimated from national accounts and other macroeconomic data International and comparative in scope the book contains chapters prepared by specialists from the different countries concerned This landmark book is indispensable to an understanding of the history and development of large scale econometric models of modern economies The Methodology of Economic Model Building Lawrence A. Boland, 1991 Model building has been the backbone of modern economic theory over the last 25 years and the major methodological task for each model builder has been to establish the testability of each model developed Too often though seemingly innocent modelling assumptions can make a model virtually impossible to test even under ideal conditions yet few economic theorists have examined the methodological requirements and problems of assuring testability in economics Lawrence Boland considers how economists have applied Popper's views on the need for error detection and testability theories in science The methodological debates these theories have inspired are related to wider debates on empiricism and the truth status of models in the natural and social sciences He concludes by arguing that the practice of model building in economics reflects the methodological prescriptions of Samuelson more than the falsification theory usually attributed to Popper Economic Model Building Frank Neal, 1976 *Model Building in Economics* Lawrence A. Boland, 2014-09-15 Concern about the role and the limits of modeling has heightened after repeated questions were raised regarding the dependability and suitability of the models that were used in the run up to the 2008

financial crash In this book Lawrence Boland provides an overview of the practices of and the problems faced by model builders to explain the nature of models the modeling process and the possibility for and nature of their testing In a reflective manner the author raises serious questions about the assumptions and judgments that model builders make in constructing models In making his case he examines the traditional microeconomics macroeconomics separation with regard to how theoretical models are built and used and how they interact paying particular attention to the use of equilibrium concepts in macroeconomic models and game theory and to the challenges involved in building empirical models testing models and using models to test theoretical explanations
