Healing And Scarring Of Atheroma:

The Healing and Scarring of Atheroma M. Wolman, 2013-03-09 The study of atherosclerosis centered since the first decade of the present century on etiology and pathogenesis In fact the studies of the military academy of medicine in St Petersburg have opened the way of inducing atherosclerosis in animals Pathogenesis of atheroma has been studied since then in humans and animals naturally prone to the development of the disease and by a variety of dietary and other procedures The various experimental studies allowed science to evaluate the relative importance of different factors genetic dietary hormonal pharmacological mechanical circulatory etc in atherogenesis Epidemiological studies as well as biochemical plasma lipid and lipoprotein estimations coupled with light microscopic histo chemical and electron microscopic investigations decreased the gap between observations on the human and experimental animal research The enormous literature covering this field allows the intelligent reader to formulate a comprehensive concept regarding etiological factors and pathogenesis of atherosclerosis Its impact on preventive and curative medicine was however limited in scope *The Healing and Scarring of Atheroma* M. The Role of Proteoglycans and Glycosaminoglycans in Aging K. Sames, 1994-07-27 The present monograph is a brief but extensive review of the role of PGs in nearly all human and animal organ systems with a very sophisticated method of classification Gerontology *Ganglioside Structure, Function, and Biomedical Potential* Robert W. Ledeen, 2012-12-06 This volume contains the proceedings of the symposium on Ganglioside Structure Function and Biomedical Potential which was held at Parksville Vancouver Island B C Canada on July 6 10 1983 The symposium was organized as a satellite to the ninth meeting of the International Society for Neurochemistry held immediately afterward in Vancouver City B C Close to 50 speakers from 9 countries presented papers on a wide range of topics on the ganglioside theme These encompassed the many aspects of basic research that have evolved over the past half century as well as some newer topics relating to the biomedical potential of gangliosides as therapeutic agents One of the purposes of the meeting was to encourage dialogue between investigators in these seemingly diverse areas in the hope that each would come away with fresh perspective toward his own work Judging from the many spirited informed discussions that took place throughout the four day meeting this goal was achieved The charm and beauty of Vancouver Island undoubtedly contributed to the congenial atmosphere which quickly developed among the 120 or so participants Drawn from 13 countries of Europe East and West America North and South Asia and the Middle East this gathering reflected the broad geographical scale on which ganglioside research is now conducted That this field is still in its logarithmic stage of growth is indicated by the increasing number of citations appearing each year in the various abstracts e g fig next page

Molecular Biology and Pathogenesis of Coronaviruses P. J. Rottier, 2012-12-06 The present volume contains the Proceedings of an EMBO Workshop organized in June 1983 by the Institute of Virology Veterinary Faculty State University of Utrecht The Netherlands Some 70 scientists from 11 countries followed the invitation to present and discuss their recent data on the structure

replication genetics and pathogenesis of coronaviruses It was the second international meeting on these viruses the Workshop which was held in Zeist near Utrecht followed the example of the Wuerzburg symposium of October 1980 At that time it became clear that coronaviruses are unique in many respects Once a group of viruses that were defined merely on the basis of their characteristic peplomer morphology Coronaviridae family members are known today to be constructed from essentially three polypeptides to use a nested set of 5 6 subgenomic mRNAs in the expression of their large positive and single stranded RNA genome to generate these subgenomic RNAs through specific fusion of non contiguous sequences to mature by budding from intracellular membranes to cause persistent infection with neurological involvement and sometimes immunopathological conditons These and many other findings have been established only very recently The articles collected in this book reveal and or further detail these findings Since these Proceedings contain the combined scientific presentations of representatives from virtually all laboratories engaged in the field they provide a fairly comprehensive review of the state of the art in corona virology

Regression of Atherosclerotic Lesions M. Rene Malinow,2013-06-29 The Advanced Study Institute on Regression of Atherosclerotic Lesions sponsored by the North Atlantic Treaty Organization was held in Maratea Italy September 11 13 1983 The institute was designed to foster discussion of experimental data on the regression of atherosclerosis in animals and evidence of a similar phenomenon in humans The participating scientists showed with anatomical and biochemical data that atherosclerosis regresses in cholesterol fed animals after withdrawal of atherogenic stimuli The existence of regression in humans was inferred from sequential angiographic visualization of arteries but anatomical and biochemical characteristics of the process have not been defined Two mechanisms are probably involved in such an angiographic regression The first which may occur when hyperlipidemia is partly or fully corrected or during undernutrition or other metabolic abnormalities may be related to atherosclerosis changes noted in animals undergoing regression The second type seems independent of changes in plasma lipid levels and may involve resolution of thrombi or other underlying arterial wall factors The relative frequencies of the two mechanisms are unknown whether they can occur simultaneously also warrants consideration It is likely that an exciting milestone will be forthcoming when regression of atherosclerosis is unequivocally demonstrated in humans Publication of these institute proceedings constitutes a valuable background for future developments

National Library of Medicine Current Catalog National Library of Medicine (U.S.), *Boyd's Pathology (Systemic Pathology)* J R Bhardwaj,2013-01-01 Boyd s Textbook makes pathology easy to understand and interesting to learn through its unique and inimitable style of presentation This is a friendly and standard text that has served the needs of many generations of students and faculties across many countries The Tenth Edition retains the original style and flavour of Boyd while presenting a contemporary and updated exposition of pathology

Current Catalog National Library of Medicine (U.S.), **Who's who in Australia** ,2007 Contractile Mechanisms in Muscle Gerald Pollack,2013-03-13 Prior to the emergence of the sliding filament model contraction theories had been in abundance

In the absence of the kinds of structural and biochemical information available today it has been a simple matter to speculate about the possible ways in which tension generation and shortening might occur The advent of the sliding filament model had an immediate impact on these theories within several years they fell by the wayside and attention was redirected towards mechanisms by which the filaments might be driven to slide by one another In terms of identifying the driving mechanism the pivotal observation was the electron micrographic identification of cross bridges extending from the thick filaments It was quite naturally assumed that such bridges which had the ability to split ATP were the molecular motors i e that they were the sites of mechanochemical transduction Out of this presumption grew the cross bridge model in which filament sliding is presumed to be driven by the cyclic interaction of cross bridges with complementary actin sites located along the thin filaments

Special Report Series ,1920 **Oxygen Transport to Tissue-V** D. W. Lubbers,2012-12-06 On the understanding that few people ever read the preface to any book and also on the understanding that even those few people who do read the preface realize that virtually nothing of any substance is ever said I shall write at such length as will be proportional to my expected readership The meetings of the International Society on Oxygen Transport to Tissue provide a forum for discussion amongst scientists who although being from very diverse and specialized backgrounds have tissue oxygenation as a unifying theme of interest The wide variety of research material presented in this volume and the multiplicity of the experimental techniques described should serve as an adequate gauge to the range of expertise and knowledge of the society's members Such diversity should also stress the importance of the need for multidisciplinary approaches to complex biological problems In attempting a fundamental characterization of a biological process such as tissue oxygenation the application of very many separate research skills are necessary such as mathematics engineering biophysics biochemistry physiology histology and clinical medicine The success of the ISOTT has and we hope will continue to be causing a combination of individuals to direct their specialized knowledge to the many facets of a single process tissue oxygenation
