Human and Ecological Risk Assessment Dennis J. Paustenbach, 2024-04-15 Understand the fundamentals of human risk assessment with this introduction and reference. Human risk assessments are a precondition for virtually all industrial action or environmental regulation, all the more essential in a world where chemical and environmental hazards are becoming more abundant. These documents catalog potential environmental, toxicological, ecological, or other harms resulting from a particular hazard, from chemical spills to construction projects to dangerous workplaces. They turn on a number of variables, of which the most significant is the degree of human exposure to the hazardous agent or process. Human and Ecological Risk Assessment combines the virtues of a textbook and reference work to introduce and analyze these vital documents. Beginning with the foundational theory of human health risk assessment, it then supplies case studies and detailed analysis illustrating the practice of producing risk assessment documents. Fully updated and authored by leading authorities in the field, the result is an indispensable work. Readers of the second edition of Human and Ecological Risk Assessment will also find Over 40 entirely new case studies reflecting the latest in risk assessment practice. Detailed discussion of hazards including air emissions, contaminated food, and soil, hazardous waste sites, and many more. Case studies from multiple countries to reflect diverse international standards. Human and Ecological Risk Assessment is ideal for professionals and advanced graduate students in toxicology, industrial hygiene, occupational medicine, environmental science, and all related subjects.

Dioxins and Health

A. Schecter,2013-11-11 This book originated in a series of cross disciplinary conversations in the years 1984 1990 between the editor who is a physician researcher involved in clinical and laboratory research and a dioxin toxicologist During the years in which the conversations took place an extraordinary amount of new scientific literature was published related to dioxins defined for purposes of this text as the chlorinated dibenzo p dioxins dibenzofurans polychlorinated biphe nyls PCB s and other compounds that are structurally and toxicologically similar to 2 3 7 8 tetrachlorodibenzo p dioxin 2 3 7 8 TCDD the

most extensively studied and most toxic of this group of chemicals Dioxins also began to interest not only chemists and toxicologists but also specialists from diverse disciplines such as wildlife and environmental science immunology neuroscience public health epidemiology medicine government law sociology and journalism Specialists from such varied disciplines while familiar with their own literature frequently did not have time to follow the dioxin literature outside their specialty area In addition each specialty had unique knowledge methods and perspectives Cross disciplinary conversation was necessary but all too frequently specialists from the various disciplines did not speak the same language resulting in misunderstanding

The Illusion of Certainty Erik Rifkin, Edward Bouwer, 2007-09-23 Risk analysis and risk assessment have been with us long enough for the terms to sound familiar to most people Standard fare for the nuclear power industry and the military for a half a century or more risk assessment is now a routine aspect of environmental management public health and individual medical decision making There have been popular books on risk and the current poker craze will likely spread risk concepts to an even wider and younger audience Yet despite all of this extensive and varied experience we the analysts and practitioners have not done nearly enough to explain to the people who need to know what they need to know especially the uncertainty inherent in risk estimates There are many instances in which the failure to communicate risk information accurately or completely has had an important and material impact on decisions and actions I have been involved in some of these ranging from local plans for water management to national decisions about nuclear waste I have seen first hand the effects of poorly done risk assessments and bad risk communication and especially the way in which the uncertainty of risk estimates is handled or mishandled The consequences of doing this wrong are high It is high time that we addressed this gap in understanding and this book is an excellent and important step in doing so
