*Encyclopedia of the Mind* Harold Pashler, 2013-01-14 It is hard to conceive of a topic of more broad and personal interest than the study of the mind. In addition to its traditional investigation by the disciplines of psychology, psychiatry and neuroscience, the mind has also been a focus of study in the fields of philosophy, economics, anthropology, linguistics, computer science, molecular biology, education and literature. In all these approaches there is an almost universal fascination with how the mind works and how it affects our lives and our behavior. Studies of the mind and brain have crossed many exciting thresholds in recent years and the study of mind now represents a thoroughly cross-disciplinary effort. Researchers from a wide range of disciplines seek answers to such questions as: What is mind? How does it operate? What is consciousness? This encyclopedia brings together scholars from the entire range of mind-related academic disciplines from across the arts and humanities, social sciences, life sciences and computer science and engineering to explore the multidimensional nature of the human mind.

This new edition of *Anxiety*, part of the popular *Clinical Psychology: A Modular Course Series*, updates the remarkable developments that have occurred in the understanding of anxiety and the astonishing dissemination of effective methods of treatment. This book details the growth of positive psychology with its emphasis on learned optimism and resilience influencing clinical psychology and psychological therapy and explains the new concept of *prospection*, a key element in positive psychology based on the human ability to imagine thoughts and images about the future. It is said that we are influenced by the past but drawn into the future and this notion has significant implications for anxiety. The recent infusion of positivity into theorising about anxiety has introduced a welcome balance into our understanding of this phenomenon. This informative book covers the latest developments in research, therapy and theorising, containing numerous case history illustrations about anxiety. It should appeal to practising and trainee psychologists and practitioners in related fields.

M. V. Landow, 2006 College students are subject to a massive input of stresses which require successful and ever-changing coping strategies. These stresses include inside and outside pressures by the world to succeed, financial worries, concerns about uncertain futures, social problems and opportunities since college is often the meeting place for future mates and homework and tests in multiple and complex subjects requiring preparation and focus with often conflicting priorities. Unsuccessful coping often results in anxiety, heavy drinking, depression, and a host of other mental health problems. This new book presents new and important research in this important field. *Concepts and Controversies in Obsessive-Compulsive Disorder*

Jonathan S. Abramowitz, Arthur C. Houts, 2006-11-22 Few syndromes in psychopathology generate as much popular curiosity and clinical exploration as does obsessive compulsive disorder (OCD). Since the 1970s, research on OCD has increased exponentially. Specific advances include an improved grasp of the heterogeneity of the disorder, identification of putative subtyping schemes, and the development of increasingly sophisticated theoretical models of the etiology and maintenance. Perhaps most importantly, research has led to advances in treatment and, whereas the first-line therapies (cognitive behavioral therapy and serotonergic medication) are not entirely effective for every sufferer, they have transformed OCD from an unmanageable lifetime affliction into a treatable problem that need not reduce quality of life. Despite the aforementioned advances, there have emerged a number of sharp disagreements concerning OCD. Differences have surfaced over phenomenological issues, etiological models, and approaches to treatment and often occur but not exclusively along disciplinary lines between biologically oriented and cognitively/behaviorally oriented authorities. For example, medical approaches posit that abnormal biological processes cause OCD, whereas psychosocial formulations emphasize the role of learning and dysfunctional cognitions. Yet because theoretical conjecture and empirical findings from within each tradition are typically addressed toward distinct and narrow audiences, clinicians, researchers, and students with broad interests are hindered from gaining a clear grasp of the diverse and sometimes polarized perspectives. **Child**
