Armbruster,1989 *Learning From Textbooks* Bruce K. Britton,Arthur Woodward,Marilyn Binkley,2012-11-12 It is surprising that there is so little research on textbooks given their centrality to teaching and learning in elementary and secondary schools Textbooks have become a focus of political and cultural controversy advocating a multicultural curriculum that has sparked some vigorous protests Research is absent in this debate therefore questions of legitimate knowledge the role of textbooks textbook design policy selection issues and economic issues concerning the marketplace are not part of the current debate Without insights of research on considerate text mentioning illustrations and so forth the current controversy will result in publishers responding to demands for more content not less thus textbooks will become compendia of information that on the surface satisfy everyone This volume demonstrates how research on important issues relative to textbook design can advance our knowledge about what makes textbooks effective learning tools and thus inform policymakers publishers and those involved in textbook selection Representing pure and applied approaches researchers present papers on the quality of writing the role of questions the role of pictures and illustrations and the role of auxiliary materials in the design of effective textbooks The chapters provide insight into research and its application to textbook design and improvement stimulating others to follow this lead **Price List and Order Form for Science Instructional Materials** ,1990 **The Science Teacher** ,1998 Some issues are accompanied by a CD ROM on a selected topic **Price and Order Form for Science Instructional Materials** ,1988

The Psychology of Science Text Comprehension José Otero,José A. León,Arthur C. Graesser,2014-04-04 This volume's goal is to provide readers with up to date information on the research and theory of scientific text comprehension It is widely acknowledged that the comprehension of science and technological artifacts is very difficult for both children and adults The material is conceptually complex there is very little background knowledge for most individuals and the materials are often poorly written Therefore it is no surprise that students are turned off from learning science and technology Given these challenges it is important to design scientific text in a fashion that fits the cognitive constraints of the learner The enterprise of textbook design needs to be effectively integrated with research in discourse processing educational technology and cognitive science This book takes a major step in promoting such an integration This volume provides an important integration of research and theory with theoretical methodological and educational applications includes a number of chapters that cover how science text information affects mental representations and strategies introduces important suggestions about how text design and new technologies can be thought of as pedagogical features and establishes academic text taxonomies and a consensus of the criteria to organize inferences and other mental mechanisms
