Headspace Analysis of Foods and Flavors Russell L. Rouseff, Keith R. Cadwallader, 2012-12-06 Headspace gas analysis is an analytical technique that has been successfully applied to food flavors for over 20 years but has experienced a resurgence of interest and innovation in recent years In its truest form headspace analysis represents the direct collection and analysis of the mixture of vapors in the space immediately above a food or beverage The technique offers several advantages for workers interested in how a product smells and ultimately tastes It offers the advantages of speed simplicity and more importantly represents the aroma profile a consumer is likely to experience just before consuming the product Since only volatile components are collected the sample is totally free of nonvolatile residues which commonly plague comparison liquid liquid extracts of the same product This is the first book devoted to headspace analysis in foods and beverages in more than 20 years The publication contains chapters on the basic theory of headspace analysis as well as the theory and application of newly developed headspace techniques such as solid phase micro extraction SPME and electronic noses New concentrating and desorption techniques are described in addition to a raft of food applications including tomato and citrus juices alcoholic beverages baguettes dairy products lipids grill flavoring baked potato and meat Chapters on off flavors as well as aroma food matrix interactions are also included This is the bible of headspace analysis If you are involved in or planning on becoming involved or want to learn more about this incredible subject then buy this book immediately
