DeBoer,2011-01-01 The goal of this volume of Research in Science Education is to examine the relationship between science education policy and practice and the special role that science education researchers play in influencing policy It has been suggested that the science education research community is isolated from the political process pays little attention to policy matters and has little influence on policy But to influence policy it is important to understand how policy is made and how it is implemented This volume sheds light on the intersection between policy and practice through both theoretical discussions and practical examples This book was written primarily about science education policy development in the context of the highly decentralized educational system of the United States But because policy development is fundamentally a social activity involving knowledge values and personal and community interests there are similarities in how education policy gets enacted and implemented around the world This

volume is meant to be useful to science education researchers and to practitioners such as teachers and administrators because it provides information about which aspects of the science education enterprise are affected by state local and national policies It also provides helpful information for researchers and practitioners who wonder how they might influence policy In particular it points out how the values of people who are affected by policy initiatives are critical to the implementation of those policies

Using Research Evidence in Education Kara S. Finnigan, Alan J. Daly, 2014-03-24 This book includes a set of rigorous and accessible studies on the topic of research evidence from a variety of levels and educational vantage points. It also provides the reader with thoughtful commentaries from leading thinkers in the field. The complex process of acquiring, interpreting, and using research evidence makes for a rich and under-examined area in educational research practice and policymaking. Policy makers, practitioners, and scholars are in need of additional knowledge and practical steps in terms of the uptake of evidence into practice. In addition, sharpening understanding in terms of the ways in which research evidence is shaped or adapted at different educational levels—school, district, state, federal—as well as the factors that support or constrain the acquisition and use of research evidence is of immediate use. While professional support for evidence-based practice in schools has never been stronger, credible research has found only weak large-scale effects. This book provides us with key insights about the nature of this problem and a comprehensive approach to its solution; it is a major step toward realizing the considerable potential for school improvement of reciprocal working relationships among policy, practice, and research communities. Ken Leithwood, Emeritus Professor, OISE, University of Toronto. The problem of scant research use at school sites is old, but the federal-to-classroom level scope of this book is unique. The authors' analysis of the current status leads to despair, but they provide a clear and compelling path forward. Michael Kirst, Professor Emeritus, Stanford University. President, California State Board of Education. We have come a long way since the linear Research Dissemination Utilization models of knowledge use of the 1970s and 80s. Each chapter in this book lays out new directions for understanding how individuals, relationships, and systems advance or impede the movement of new ideas into policy practice. Taken together, they redefine knowledge use as a dynamic process that affects and is affected by specific characteristics of the social structures in which it occurs. It is a must-read both for those interested in educational change and organizational theory. Karen Seashore Louis, Regents Professor, University of Minnesota.
