Emotion Qualia And Consciousness:

Emotions, Qualia, And Consciousness Alfred Kaszniak, 2001-07-19 The experience of emotion is a ubiquitous component of the stream of consciousness emotional qualia interact with other contents and processes of consciousness in complex ways Recent research has supported the hypothesis that important functional aspects of emotion can operate outside the conscious awareness Primary types of emotions are found in animals while secondary more complex types are involved in interpersonal relationships Emotions both influence genetic repair mechanisms of individuals and are responsible for group behavior Many scholars and scientists believe that no scientific or philosophic account of consciousness can be complete without an understanding of the role of emotion

Emotion, Qualia and Consciousness Alfred Kaszniak, 2000 Taken from a conference held by the International School of Biocybernetics these papers explore the role of emotion in scientific or philosophical accounts of consciousness They should be of interest to researchers in biocybernetics neurosciences cognitive sciences and psychology

Emotion Explained Edmund T. Rolls, 2005 What produces emotions Why do we have emotions How do we have emotions Why do emotional states feel like something This book seeks explanations of emotion by considering these questions Emotion continues to be a topic of enormous scientific interest This new book a successor to *The Brain and Emotion* OUP 1998 describes the nature functions and brain mechanisms that underlie both emotion and motivation *Emotion Explained* goes beyond examining brain mechanisms of emotion by proposing a theory of what emotions are and an evolutionary Darwinian theory of the adaptive value of emotion It also shows that there is a clear relationship between motivation and emotion The book also examines how cognitive states can modulate emotions and in turn how emotions can influence cognitive states It considers the role of sexual selection in the evolution of affective behaviour It also examines emotion and decision making with links to the burgeoning field of neuroeconomics The book is also unique in considering emotion at several levels the neurophysiological neuroimaging neuropsychological behavioural and computational neuroscience levels

Consciousness Christopher S. Hill, 2009-10-22 This book presents a comprehensive theory of consciousness The initial chapter distinguishes six main forms of consciousness and sketches an account of each one Later chapters focus on phenomenal consciousness consciousness of and introspective consciousness In discussing phenomenal consciousness Hill develops the representational theory of mind in new directions arguing that all awareness involves representations even awareness of qualitative states like pain He then uses this view to undercut dualistic accounts of qualitative states Other topics include visual awareness visual appearances emotional qualia and meta cognitive processing This important work will interest a wide readership of students and scholars

in philosophy of mind and cognitive science **Philosophy of the Brain** Georg Northoff, 2004 What is the mind What is the relationship between brain and mind These are common questions But What is the brain is a rare question in both the neurosciences and philosophy The reason for this may lie in the brain itself Is there a brain problem In this fresh and innovative book Georg Northoff demonstrates that there is in fact a brain problem He argues that our brain can only be understood when its empirical functions are directly related to the modes of acquiring knowledge our epistemic abilities and inabilities Drawing on the latest neuroscientific data and philosophical theories he provides an empirical epistemic definition of the brain Northoff reveals the basic conceptual confusion about the relationship between mind and brain that has so obstinately been lingering in both neuroscience and philosophy He subsequently develops an alternative framework where the integration of the brain within body and environment is central This novel approach plunges the reader into the depths of our own brain The Philosophy of the Brain that emerges opens the door to a fascinating world of new findings that explore the mind and its relationship to our very human brain Series A **Toward a Science of Consciousness III** Stuart R. Hameroff, Alfred W. Kaszniak, David John Chalmers, 1999 Can there be a science of consciousness This issue has been the focus of three landmark conferences sponsored by the University of Arizona in Tucson The first two conferences and books have become touchstones for the field This volume presents a selection of invited papers from the third conference Can there be a science of consciousness This issue has been the focus of three landmark conferences sponsored by the University of Arizona in Tucson The first two conferences and books have become touchstones for the field This volume presents a selection of invited papers from the third conference It showcases recent progress in this maturing field by researchers from philosophy neuroscience cognitive psychology phenomenology and physics It is divided into nine sections the explanatory gap color neural correlates of consciousness vision emotion the evolution and function of consciousness physical reality the timing of conscious experience and phenomenology Each section is preceded by an overview and commentary by the editors Contributors Dick J Bierman Jeffrey Burgdorf A Graham Cairns Smith William H Calvin Christian de Quincey Frank H Durgin Vittorio Gallese Elizabeth L Glisky Melvyn A Goodale Richard L Gregory Scott Hagan C Larry Hardin C A Heywood Masayuki Hirafuji Nicholas Humphrey Harry T Hunt Piet Hut Alfred W Kaszniak Robert W Kentridge Stanley A Klein Charles D Laughlin Joseph Levine Lianggang Lou Shimon Malin A David Milner Steven Mithen Martine Nida Rumelin Stephen Palmer Jaak Panksepp Dean Radin Steven Z Rapcsak Sheryl L Reminger Antti Revonsuo Gregg H Rosenberg Yves Rossetti Jeffrey M Schwartz Jonathan Shear Galen Strawson Robert Van Gulick Frances Vaughan Franz X Vollenweider B Alan Wallace Douglas F Watt Larry Weiskrantz Fred A Wolf Kunio Yasue Arthur Zajonc *Cognition, Computation, and Consciousness* Masao Ito, Yasushi Miyashita, Edmund T. Rolls, 1997-05-29 The topic of consciousness is truly multidisciplinary attracting researchers and theorists from diverse backgrounds It is now widely accepted that previously disparate areas all have contributions to make to the understanding of the nature of consciousness Thus we now have computational scientists neuroscientists and

philosophers all engaged in the same effort This book illustrates these three approaches with chapters provided by some of the most important and provocative figures in the field The first section is concerned with philosophical approaches to consciousness One of the fundamental issues here is that of subjective feeling or qualia The second section focuses on approaches from cognitive neuroscience Patients with different types of neurological problems and new imaging techniques provide rich sources of data for studying how consciousness relates to brain function The third section includes computational approaches looking at the quantitative relationship between brain processes and conscious experience Cognition Computation and Consciousness represents a uniquely integrated and current account of this most fascinating and intractable subject

Current Research and Emerging Directions in Emotion-Cognition Interactions Florin Dolcos, Lihong Wang, Mara Mather, 2015-03-02 Emotion can impact various aspects of our cognition and behavior by enhancing or impairing them e.g. enhanced attention to and memory for emotional events or increased distraction produced by goal irrelevant emotional information On the other hand emotion processing is also susceptible to cognitive influences typically exerted in the form of cognitive control of motion or emotion regulation Despite important recent progress in understanding emotion cognition interactions a number of aspects remain unclear The present book comprises a collection of manuscripts discussing emerging evidence regarding the mechanisms underlying emotion cognition interactions in healthy functioning and alterations associated with clinical conditions in which such interactions are dysfunctional Initiated with a more restricted focus targeting 1 identification and in depth analysis of the circumstances in which emotion enhances or impairs cognition and 2 identification of the role of individual differences in these effects our book has emerged into a comprehensive collection of outstanding contributions investigating emotion cognition interactions based on approaches spanning from behavioral and lesion to pharmacological and brain imaging and including empirical theoretical and review papers alike Co hosted by the Frontiers in Neuroscience Integrative Neuroscience and Frontiers in Psychology Emotion Science the contributions comprising our book and the associated research topic are grouped around the following seven main themes distributed across the two hosting journals I Emotion and Selectivity in Attention and Memory II The Impact of Emotional Distraction Linking Enhancing and Impairing Effects of Emotion III What Really is the Role of the Amygdala IV Age Differences in Emotion Processing The Role of Emotional Valence V Affective Face Processing Social Cognition and

Personality Neuroscience VI Stress Mood Emotion and the Prefrontal Cortex The Role of Control in the Stress Response VII Emotion Cognition Interactions in Clinical Conditions As illustrated by the present collection of contributions emotion cognition interactions can be identified at different levels of processing from perception and attention to long term memory decision making processes and social cognition and behavior Notably these effects are subject to individual differences that may affect the way we perceive experience and remember emotional experiences or cope with emotionally challenging situations Moreover these opposing effects tend to co occur in affective disorders such as depression and PTSD where uncontrolled recollection of and rumination on distressing memories also lead to impaired cognition due to emotional distraction Understanding the nature and neural mechanisms of these effects is critical as their exacerbation and co occurrence in clinical conditions lead to devastating effects and debilitation Hence bringing together such diverse contributions has allowed not only an integrative understanding of the current extant evidence but also identification of emerging directions and concrete venues for future investigations
