Empire Of Light A History Of Discovery In Science And Art:

Empire of Light, 1998 **Empire of Light:** Sidney Perkowitz, A Joseph Henry Press book, 1998-11-23 In *Empire of Light* Sidney Perkowitz combines the expertise of a physicist with the vision of an art connoisseur and the skill of an accomplished writer to offer a unique view of the most fundamental feature of the universe light *Empire of Light* discusses the nature of light how the eye sees and how our understanding of these phenomena have emerged over the ages including the role of light in the development of quantum physics The author examines the making of electrical light and its integration into commerce telecommunications entertainment medicine warfare and every other aspect of our daily lives And he presents the role of light in the search for the beginning and the end of the universe as astronomers with their instruments penetrate ever deeper into the sky Visible light spans the spectrum between infrared and ultraviolet but this book reaches across many other spectra as well from the cave paintings at Lascaux to Mark Rothko's stark blocks of color in today's art museums from Plato's speculation that the eye sends out rays to Ramon y Cajal's discovery that vision actually works in the opposite way from Tycho Brahe's elegant antetelescope measurements of planet positions to the Hubble telescope's exquisite sensitivity to light from billions of light years away What are the biological and neurological processes of perceiving visible light How does a person typically scan a scene Do you see red or blue the same way I do What are our physiological reactions and emotional responses to light Perkowitz explores these and many other fascinating questions drawing together the experiences achievements and perspectives of a diverse cast of characters including Galileo Einstein Newton Van Gogh and Edison *Empire of Light* is written so that lay readers will readily grasp the scientific principles and science professionals will readily appreciate the human experience It will impart new wonder to the daily experience of light in our world Sidney Perkowitz is the Charles Howard Candler Professor of Physics at Emory University His work has appeared in national publications such as *The Sciences* *The Washington Post* *The Los Angeles Times* *The American Prospect* and *Technology Review* *New and Forthcoming Books* National Academy Press (U.S.), 2000 *Beyond Mimesis and Convention* Roman Frigg, Matthew Hunter, 2010-04-28 Representation is a concern crucial to the sciences and the arts alike Scientists devote substantial time to devising and exploring representations of all kinds From photographs and computer generated images to diagrams charts and graphs from scale models to abstract theories representations are ubiquitous in and central to science Likewise after spending much of the twentieth century in proverbial exile as abstraction and Formalist aesthetics reigned supreme representation has returned with a vengeance to contemporary visual art Representational photography video and ever evolving forms of new media now figure prominently in the globalized art world while this return of the real has re energized problems of representation in the traditional media of painting and sculpture If it ever really left representation in the arts is certainly back Central as they are to science and art these representational concerns have been perceived as different in kind and as objects of separate intellectual traditions Scientific modeling and theorizing have been topics of heated debate in

twentieth century philosophy of science in the analytic tradition while representation of the real and ideal has never moved far from the core humanist concerns of historians of Western art Yet both of these traditions have recently arrived at a similar impasse Thinking about representation has polarized into oppositions between mimesis and convention Advocates of mimesis understand some notion of mimicry or similarity resemblance or imitation as the core of representation something represents something else if and only if the former mimics the latter in some relevant way Such mimetic views stand in stark contrast to conventionalist accounts of representation which see voluntary and arbitrary stipulation as the core of representation Occasional exceptions only serve to prove the rule that mimesis and convention govern current thinking about representation in both analytic philosophy of science and studies of visual art This conjunction can hardly be dismissed as a matter of mere coincidence In fact researchers in philosophy of science and the history of art have increasingly found themselves trespassing into the domain of the other community pilfering ideas and approaches to representation Cognizant of the limitations of the accounts of representation available within the field philosophers of science have begun to look outward toward the rich traditions of thinking about representation in the visual and literary arts Simultaneously scholars in art history and affiliated fields like visual studies have come to see images generated in scientific contexts as not merely interesting illustrations derived from high art but as sophisticated visualization techniques that dynamically challenge our received conceptions of representation and aesthetics Beyond Mimesis and Convention Representation in Art and Science is motivated by the conviction that we students of the sciences and arts are best served by confronting our mutual impasse and by recognizing the shared concerns that have necessitated our covert acts of kleptomania Drawing leading contributors from the philosophy of science the philosophy of literature art history and visual studies our volume takes its brief from our title That is these essays aim to put the evidence of science and of art to work in thinking about representation by offering third or fourth or fifth ways beyond mimesis and convention In so doing our contributors explore a range of topics fictionalism exemplification neuroaesthetics approximate truth that build upon and depart from ongoing conversations in philosophy of science and studies of visual art in ways that will be of interest to both interpretive communities To put these contributions into context the remainder of this introduction aims to survey how our communities have discretely arrived at a place wherein the perhaps surprising collaboration between philosophy of science and art history has become not only salubrious but a matter of necessity
