From A To B And Back Again:

The Philosophy of Andy Warhol Andy Warhol, 1977 Warhol offers his observations of love beauty fame work and art and discusses the continuous play and display of his many fetishes **Andy Warhol** Donna M. De Salvo, Jessica Beck (Art museum curator), 2018-01-01 A unique 360 degree view of an incomparable 20th century American artist One of the most emulated and significant figures in modern art Andy Warhol 1928 1987 rose to fame in the 1960s with his iconic Pop pieces Warhol expanded the boundaries by which art is defined and created groundbreaking work in a diverse array of media that includes paintings sculptures prints photographs films and installations This ambitious book is the first to examine Warhol's work in its entirety It builds on a wealth of new research and materials that have come to light in recent decades and offers a rare and much needed comprehensive look at the full scope of Warhol's production from his commercial illustrations of the 1950s through his monumental paintings of the 1980s Donna De Salvo explores how Warhol's work engages with notions of public and private the redefinition of media and the role of abstraction while a series of incisive and eye opening essays by eminent scholars and contemporary artists touch on a broad range of topics such as Warhol's response to the AIDS epidemic his international influence and how his work relates to constructs of self image seen in social media today *From Here to There* Michael Bond, 2020-05-12 A Wired Most Fascinating Book of the Year An important book that reminds us that navigation remains one of our most underappreciated arts Tristan Gooley author of *The Lost Art of Reading Nature's Signs* If you want to understand what rats can teach us about better planned cities why walking into a different room can help you find your car keys or how your brain's grid border and speed cells combine to give us a sense of direction this book has all the answers *The Scotsman* How is it that some of us can walk unfamiliar streets without losing our way while the rest of us struggle even with a GPS Navigating in uncharted territory is a remarkable feat if you stop to think about it In this beguiling mix of science and storytelling Michael Bond explores how we do it how our brains make the cognitive maps that keep us orientated and how that anchors our sense of wellbeing Children are instinctive explorers developing a spatial understanding as they roam And yet today few of us make use of the wayfinding skills that we inherited from our nomadic ancestors Bond tells stories of the lost and found sailors orienteering champions early aviators and explores why being lost can be such a devastating experience He considers how our understanding of the world around us affects our psychology and helps us see how our reliance on technology may be changing who we are Bond concludes that by setting aside our GPS devices by redesigning parts of our cities and play areas and sometimes just by letting ourselves get lost we can indeed revivify our ability to find our way to the benefit of our inner world no less than the outer one *Science* A thoughtful argument about how our ability to find our way is integral to our nature *Sunday Times* **From Ecology to Cancer Biology and Back Again** Frederick R.
