James G. Speight, James G. Speight, 2020-02-06 Historically the development of civilization has upset much of the earth's ecosystem leading to air, land, and water pollution. The author defines pollution as the introduction of a foreign substance into an ecosystem via air, land, or water. This book delves into issues that affect the everyday lives of people who come in contact with these hazards. By examining these issues, this body of work aims to stimulate debate and offer solutions to the ever-growing threat to the environment and humanity. Includes problems with each chapter. Explores issues such as control of gaseous emissions, waste recycling, and waste disposal. Explains physical and thermal methods of waste management. Provides definitions and resources for future reference. Discusses the history of environmental technology. Emerging Technologies

Emerging Technologies in Hazardous Waste Management IV Daniel William Tedder, American Chemical Society.

Division of Industrial and Engineering Chemistry, 1994 The 18 papers were selected from over 200 presented at the symposium Atlanta, Georgia, September 1992 to reflect the most important or promising directions in hazardous waste management and to avoid duplicating information in earlier volumes of the series. Among the remedial technologies described for soils and sediments are electrokinetic and the mobilization of specific ions. Other methods include the crystallization of mechanical pulp mill effluents and the removal of gasoline vapors from air streams by biofiltration. Radioactive and mixed waste are considered in studies of the Hanford waste site in Washington and reports of laboratory scale studies. Annotation copyright by Book News Inc. Management II Daniel William Tedder, 1991 In this sequel volume to ACS Symposium Series No. 422 **Emerging Technologies in Hazardous Waste Management**, the editors expand their coverage of the subject with contributions on air treatment as well as a greater examination of computer applications and modeling. Twenty-one chapters are divided into four sections covering thermal treatment and abiotic emissions control, water management, biological treatment, and solid waste management. Of special interest is a presentation on the use of internal radiant energy within a gas-fired combustion chamber to maintain high combustion temperatures, a technique that appears important for the thermal destruction of many chlorinated species. **International Trade in Hazardous Wastes** D.K. Asante-Duah, I.V. Nagy, 1998-03-12 This book

discusses the need for a regulated and informed forum for international trade in hazardous waste. The authors argue that with careful planning, health and ecological risks can be minimized and net economic benefits realized fairly. **Emerging Technologies in Hazardous Waste Management 8** D. William Tedder, Frederick G. Pohland, 2000-05-31 Several long-term trends in technology evolution have become apparent since these symposia began in 1989. Earlier presenters more frequently discussed treatment methods involving harsh and extensive human intervention. As the symposia have continued, the number of presentations describing extremely harsh and expensive treatment technologies have gradually been supplanted by more

subtle and gentler methods Such methods include subsurface engineered barriers phytoremediation and bioremediation Nineteen manuscripts were selected for inclusion in this volume based upon peer review scientific merit the editors perceptions of lasting value or innovative features and the general applicability of either the technology itself or the scientific methods and scholarly details provided by the authors General topics include soil treatment groundwater treatment and radioactive waste treatment **Hazardous and Toxic Waste Management, January 1989 - May 1993** Louise Reynnells,1993 Radioactive Waste Management ,1981 **Environmental Management Handbook** Leopold C.
