Emerging Strategies in Neuroprotection Manangos,Lal,2013-11-21 SOLOMON H SNYDER Receptor Research Reaches Neurology Relevance to Neurodegenerative Diseases and Stroke President George Bush has heralded the 1990s as the decade of the brain based largely on the rapid escalation of advances in the molecular neuro sciences and the likelihood that these will bear therapeutic fruit before the turn of the century There is little doubt that the 1970s and 1980s have witnessed more remarkable advances in the molecular neurosciences than all of the preceding hundred years Identification of receptor sites for drugs and neurotransmitters along with simple sensitive and specific means of monitoring them has made it possible to elucidate the mechanism of action for many known drugs and to identify new chemical entities as potential therapeutic agents At the same time the numbers of distinct neurotransmitters have multiplied Prior to 1970 only the biogenic amines were well accepted as transmitters The early 1970s witnessed the gradual acceptance of amino acids as major excitatory and inhibitory neurotransmitters Identification of opiate receptors and the subsequent identification of the enkephalins as their endogenous ligands led to an appreciation of peptides as putative transmitters and the accumulation of as many as a hundred neuropeptides by the decade s end In the 1980s the revolutions of molecular biology have been applied aggressively to the neurosciences with molecular cloning for neuropeptide precursors many important neurochemical enzymes and receptors for numerous transmitters

Neuroinflammation Paul L. Wood,2002-12-18 In this thoroughly updated and revised edition of his much praised book Paul L Wood and a panel of leading researchers capture these new developments in a masterful synthesis of what is known today about the inflammatory

mediators and cells involved in neurodegenerative diseases This second edition contains extensive updates on the mediators produced by microglia and their role in neuroinflammatory induced neuronal lysis There is also increased coverage of the animal models used in the study of neuroinflammatory mechanisms of the new imaging methods that allow the noninvasive evaluation of microglial activation in human neurodegenerative disorders and of the role of neuroinflammation in amyloid dependent neuronal lysis

Molecular Basis and Emerging Strategies for Anti-aging Interventions Syed Ibrahim Rizvi,Ufuk Çakatay,2018-11-02 This book describes the nature of aging age related disorders and the molecular principles of emerging strategies for anti aging interventions while also discussing the discovery of targets for geroprotective drugs Although significant medical advances in the treatment and eradication of life threatening conditions such as cardiovascular and infectious disease have been made over the past five decades the prevalence of age related disorders still remains high in older populations Intervening into aging is the next frontier in contemporary medicine and will be of increasing importance over time as other sources of poor health are combated more and more successfully Given the universal interest in anti aging strategies the book will appeal to a very broad audience It addresses a diverse range of anti aging interventions including stem cells autophagy senolytics anti inflammatory methods and telomerase induction that will be of interest to scientists and researchers from various disciplines in the life sciences
