Midwives' Emotional Care of Women becoming Mothers Sue Barker, 2011-01-18. This book offers an overview of the emotional care given by midwives to women based on the literature reviews and research undertaken by Sue Barker. Its chapters are mostly based around the questions she asked herself when exploring the area: What is motherhood? Who supports women at this time? What is emotional care? What are the experiences of midwives offering emotional care? What is emotion work? How does emotional care help women? She considers a wide range of literature sources to understand what is happening for the midwives and the women. Given the extensive use of referenced work, the book should be useful for those thinking of undertaking a midwifery programme or those already engaged on any health care programmes. This book though is written with an easily accessible language so should be a useful source for voluntary groups and women on their journey to motherhood. Midwifery care and motherhood are influenced by the culture within which they are experienced. This book has therefore considered the cultural hegemony and the differing ideologies within midwifery. The research was undertaken in the UK where most women receive midwifery care through the NHS; therefore the midwives interviewed were all employed by the state. This may well have influenced their expectations and the women's expectations of them. It may be that independent midwives would not have experienced some of the dilemmas faced by these midwives. Despite this, the view of midwifery, professional bodies, government guidance and research all support a woman approach to giving emotional support. This book offers a detailed description of how emotional support as part of emotional care is given by midwives in their attempts to reduce or ameliorate emotional distress and provide comfort.

Analyses on Health Status and Care Needs among Older Adults Jian Sun,Hongye Luo, Yi Zeng,2025-09-12 Globally a shift in population structures and disease spectrum is inevitable The latest global burden of disease study revealed that the average healthy life expectancy has steadily increased from 1990 to 2019 worldwide However there is a concerning trend in which the growth in healthy life expectancy is lower than the growth in life expectancy in 198 out of 204 countries evaluated This implies that people spend more time in sub optimal health despite living longer Moreover non communicable diseases contribute an increasingly significant portion of the disease burden in low and middle income countries growing from one third to almost two thirds from 1990 to 2019 This mainly results from preventable risk factors It is important to approach aging with a positive outlook This entails guaranteeing sufficient medical care and proactively managing health issues in older adults Importantly since several diseases are often irreversible prevention is key Social and psychological factors due to their nebulous harm have struggled to gain attention over a long period We should aim to make the additional years gained during old age as healthful as those in other life stages *Withrow and MacEwen's Small Animal Clinical Oncology* Stephen J. Handbook of Social Support and the Family Gregory R. Pierce, I.G. Sarason, 2013-06-29 While insights sometimes are slow in coming they often seem obvious when they finally arrive This handbook is an outcome of the insight that the topics of social support and the family are very closely linked Obvious as this might seem the fact remains that the literatures dealing with social support and the family have been deceptively separate and distinct For example work on social support began in the 1970s with the accumulation of evidence that social ties and social integration play important roles in health and personal adjustment Even though family members are often the key social supporters of individuals relatively little research of social support was targeted on family interactions as a path to specifying supporter processes It is now recognized that one of the most important features of the family is its role in providing the individual with a source of support and acceptance Fortunately in recent years the distinctness and separateness of the fields of social support and the family have blurred This handbook provides the first collation and integration of social support and family research This integration calls for specifying processes such as the cognitions associated with poor support availability and unrewarding family constellations and factors such as cultural differences in family life and support provision that are pertinent to integration

How to Find and Sustain Love Gilad James, PhD, Finding and sustaining love can be challenging but it s also one of the most rewarding experiences in life The first step in finding love is to focus on yourself and your own happiness This means taking care of your physical and emotional well being pursuing your passions and interests and developing strong friendships and connections with others It s important to remember that you don t have to change yourself to find love being authentic and true to yourself is the key to attracting a compatible partner Once you ve found love sustaining it requires ongoing effort and communication This means being open

and honest with your partner making time for each other and actively listening and understanding each other's needs and feelings. It's also important to maintain a sense of independence and individuality and to continue to invest in your own growth and development. By nurturing your relationship with care and commitment, you can build a lasting and fulfilling partnership.
