some of the current issues and related questions      Finance R.A. Jarrow, 1995-12-15 Hardbound The Handbook of Finance is a primary reference work for financial economics and financial modeling students faculty and practitioners The expository treatments are suitable for masters and PhD students with discussions leading from first principles to current research with reference to important research works in the area The Handbook is intended to be a synopsis of the current state of various aspects of the theory of financial economics and its application to important financial problems The coverage consists of thirty three chapters written by leading experts in the field The contributions are in two broad categories capital markets and corporate finance      *World Scientific Reference On Contingent Claims Analysis In Corporate Finance (In 4 Volumes)* Michel Crouhy, Dan Galai, Zvi Wiener, 2019-01-21 Black and Scholes 1973 and Merton 1973 1974 hereafter referred to as BSM introduced the contingent claim approach CCA to the valuation of corporate debt and equity The BSM modeling framework is also named the structural approach to risky debt valuation The CCA considers all stakeholders of the corporation as holding contingent claims on the assets of the corporation Each claim holder has different priorities maturities and conditions for payouts It is based on the principle that all the assets belong to all the liability holders The BSM modeling framework gives the basic fundamental version of the structural model where default is assumed to occur when the net asset value of the firm at the maturity of the pure discount debt becomes negative i.e. market value of the assets of the firm falls below the face value of the firm's liabilities In a regime of limited liability the shareholders of the firm have the option to default on the firm's debt Equity can be viewed as a European call option on the firm's assets with a strike price equal to the face value of the firm's debt Actually CCA can be used to value all the components of the firm's liabilities equity warrants debt contingent convertible debt guarantees etc In the four volumes we present the major academic research on CCA in corporate finance starting from 1973 with seminal papers of Black and Scholes 1973 and Merton 1973 1974 Volume I covers the foundation of CCA and contributions on equity valuation Volume II focuses on corporate debt valuation and the capital structure of the firm Volume III presents empirical evidence on the valuation of debt instruments as well as applications of the CCA to various financial arrangements The papers in Volume IV show how to apply the CCA to analyze sovereign credit risk contingent convertible bonds CoCos deposit insurance and loan guarantees Volume 1 Foundations of CCA and Equity Valuation Volume 1 presents the seminal papers of Black and Scholes 1973 and Merton 1973 1974 This volume also includes papers that specifically price equity as a call option on the corporation It introduces warrants convertible bonds and taxation as contingent claims on the corporation It highlights the strong relationship between the CCA and the Modigliani Miller M M Theorems and the relation to the Capital Assets Pricing Model CAPM Volume 2 Corporate Debt Valuation with CCA Volume 2 concentrates on corporate bond valuation by introducing various types of bonds with different covenants as well as introducing various conditions that trigger default While empirical evidence indicates that the simple Merton's model underestimates the credit spreads additional risk factors like jumps can be used to resolve it Volume 3 Empirical Testing and

Applications of CCA Volume 3 includes papers that look at issues in corporate finance that can be explained with the CCA approach. These issues include the effect of dividend policy on the valuation of debt and equity, the pricing of employee stock options and many other issues of corporate governance. Volume 4: Contingent Claims Approach for Banks and Sovereign Debt. Volume 4 focuses on the application of the contingent claim approach to banks and other financial intermediaries. Regulation of the banking industry led to the creation of new financial securities e.g. CoCos and new types of stakeholders e.g. deposit insurers.
