The Language of Life James Lull, Eduardo Neiva, 2012-05-29 Communication in its most basic form the sending of signals and exchange of messages within and between organisms is the heart of evolution From the earliest life forms to Homo sapiens the great chain of communication drives the evolutionary process and is the indispensable component of human culture That is the central message of this unique perspective on both the biological evolution of life and the human development of culture The book explores the totality of communication processes that create and sustain biological equilibrium and social stability The authors argue that this ubiquitous connectivity is the elemental unity of life Introducing a new subdiscipline evolutionary communication the authors analyze the core domains of life sheer survival sex culture morality religion and technological change as communications phenomena What emerges from their analysis is a brilliant interpretation of life interconnected through communication from the basic molecular level to the most sophisticated manifestations of culture Challenging the boundaries of conventional approaches to cultural analysis this is an original and engaging view of evolution and an encouraging prognosis for our collective future *Language in Prehistory* Alan

Barnard, 2016-01-05 For ninety per cent of our history humans have lived as hunters and gatherers and for most of this time as talking individuals No direct evidence for the origin and evolution of language exists we do not even know if early humans had language either spoken or signed Taking an anthropological perspective Alan Barnard acknowledges this difficulty and argues that we can nevertheless infer a great deal about our linguistic past from what is around us in the present Hunter gatherers still inhabit much of the world and in sufficient number to enable us to study the ways in which they speak the many languages they use and what they use them for Barnard investigates the lives of hunter gatherers by understanding them in their own terms to create a book which will be welcomed by all those interested in the evolution of language

Origins of Language Sverker Johansson, 2005-01-01 Sverker Johansson has written an unusual book on language origins with its emphasis on empirical evidence rather than theory building This is a book for the student or researcher who prefers solid data and well supported conclusions over speculative scenarios Much that has been written on the origins of language is characterized by hypothesizing largely unconstrained by evidence But empirical data do exist and the purpose of this book is to integrate and review the available evidence from all relevant disciplines not only linguistics but also e g

neurology primatology paleoanthropology and evolutionary biology The evidence is then used to constrain the multitude of scenarios for language origins demonstrating that many popular hypotheses are untenable Among the issues covered 1 Human evolutionary history 2 Anatomical prerequisites for language 3 Animal communication and ape language 4 Mind and language 5 The role of gesture 6 Innateness 7 Selective advantage of language 8 Proto language

Language Play, Language Learning Guy Cook, 2000-02-03 This book has two related purposes The first is to demonstrate the extent and importance of language play in human life the second is to draw out the implications for applied linguistics and language teaching Language play should not be thought of as a trivial or peripheral activity but as central to human thought and culture to learning creativity and intellectual enquiry It fulfils a major function of language underpinning the human capacity to adapt as individuals as societies and as a species

German Philosophy of Language Michael N. Forster, 2011-04-07 Michael Forster here presents a ground breaking study of German philosophy of language in the nineteenth century and beyond His previous book After Herder showed that the eighteenth century philosopher J G Herder played the fundamental role in founding modern philosophy of language including new theories of interpretation hermeneutics and translation as well as in establishing such whole new disciplines concerned with language as anthropology and linguistics This new volume reveals that Herder's ideas continued to have a profound impact on such important nineteenth century thinkers as Friedrich Schlegel the leading German Romantic Wilhelm von Humboldt a founder of linguistics and G W F Hegel the leading German Idealist Forster shows that the most valuable ideas about language in this tradition were continuous with Herder's whereas deviations from the latter that occurred tended to be inferior This book not only sets the historical record straight but also champions the Herderian tradition for its philosophical depth and breadth

Higher Level Language Processes in the Brain Franz Schmalhofer, Charles A. Perfetti, 2007 Publisher description

Land and Language in Cape York Peninsula and the Gulf Country Jean-Christophe Verstraete, Diane Hafner, 2016-02-18

This volume offers a state of the art survey of linguistic anthropological archaeological and historical work focused on Cape York Peninsula and the Gulf Country in Australia's northeast. The volume also honours Bruce Rigsby, emeritus professor of anthropology at the University of Queensland, whose work has inspired all of the contributors. The papers in the volume are organized in terms of five key themes including the use of historical and archaeological methods to reconstruct aspects of language and social organization, anthropological and linguistic work uncovering aspects of world view embedded in languages and ethnographic data sets, the study of post contact transformations in language and society and the return of archival data to communities. Its thematic intersections draw together the varied disciplinary threads in an overview of the cultures and languages of the region and will appeal to all those interested in Australian Aboriginal studies, linguistics, anthropology and associated disciplines.

Social Information Transmission and Human Biology Jonathan CK Wells, Simon Strickland, Kevin Laland, 2006-05-22. Recent research has emphasized that socially transmitted information may affect both the gene pool and the phenotypes of individuals and populations and that an improved understanding of evolutionary issues is beneficial to those working towards the improvement of human health. In response to a growing interest across disciplines for information regarding the contribution of social behavior to a range of biological outcomes, *Social Information Transmission and Human Biology* connects the work of evolutionary theorists and those dealing with practical issues in human health and demographics. Combining evolutionary models with biomedical research, authors from various disciplines look at how human behavior influences health and how reproductive fitness sheds light on the processes that shaped the evolution of human behavior. Both academic and medical researchers will find much useful insight in this text.

The Materiality of Language David Bleich, 2021-12-22. A critique of male dominated modes of language use, their roots in higher education, their effects and their spill over into popular culture, David Bleich sees the human body, its affective life, social life and political functions as belonging to the study of language. In *The Materiality of Language*, Bleich addresses the need to end centuries of limiting access to language and its many contexts of use. To recognize language as material and treat it as such, argues Bleich, is to remove restrictions to language access due to historic patterns of academic censorship and unfair gender practices. Language is understood as a key path in the formation of all social and political relations and becomes available for study by all speakers who may regulate it, change it and make it flexible like other material things. A potentially foundational text in an emergent field of language studies, whose work is to break up the monopoly Linguistics and Philosophy have had on the study of language, the insight that the affective operation of language is elided in nearly all approaches to language acquisition is brilliant and astounding. The analysis of subject creation as an affective process of recognizing and sharing the same affective state and language as the means for materializing affective states is fascinating and persuasive. One of the book's distinctive features is the use of gender as a key normative analytical lens throughout. It would be difficult to exaggerate how rare this is among language thinkers and how productive it is for the arguments here.

Mirror Neurons and the Evolution of Brain and Language Maxim I. Stamenov, Vittorio Gallese, 2002-12-17 The emergence of language social intelligence and tool development are what made homo sapiens sapiens differentiate itself from all other biological species in the world The use of language and the management of social and instrumental skills imply an awareness of intention and the consideration that one faces another individual with an attitude analogical to that of one s own The metaphor of mirror aptly comes to mind Recent investigations have shown that the human ability to mirror other s actions originates in the brain at a much deeper level than phenomenal awareness A new class of neurons has been discovered in the premotor area of the monkey brain mirror neurons Quite remarkably they are tuned to fire to the enaction as well as observation of specific classes of behavior fine manual actions and actions performed by mouth They become activated independent of the agent be it the self or a third person whose action is observed The activation in mirror neurons is automatic and binds the observation and enaction of some behavior by the self or by the observed other The peculiar first to third person intersubjectivity of the performance of mirror neurons and their surprising complementarity to the functioning of strategic communicative face to face first to second person interaction may shed new light on the functional architecture of conscious vs unconscious mental processes and the relationship between behavioral and communicative action in monkeys primates and humans The present volume discusses the nature of mirror neurons as presented by the research team of Prof Giacomo Rizzolatti University of Parma who originally discovered them and the implications to our understanding of the evolution of brain mind and communicative interaction in non human primates and man Series B
