and their possible roles in revolutionizing agricultural procedures through spectral analysis of terrains soils crops water  
resources diseases floods drought and farm activities There are several semi autonomous and autonomous robotic aerial  
vehicles that are examined for their efficiency in offering detailed spectral data about agrarian regions and individual farms  
Among them small drone aircrafts such as fixed winged and copter models have already caught the imagination of farmers  
They are spreading fast in every nook and corner of the farm world However there are many more aerial robots that are  
utilized in greater detail during farming In this volume the focus is on aerial vehicles such as parafoils blimps aerostats and  
kites and how they are being evaluated for use in experimental farms and fields A few aerial vehicles such as robotic  
parafoils have been adopted to procure aerial spectral data and visual imagery to aid agronomic procedures These and other  
aerial robots are expected to change and improve the use of the sky in agricultural endeavors and the way we conduct  
agronomic procedures in the very near future This volume is a timely resource for agricultural researchers professors and
