Fast Reactor Fuel Cycles:

Fast Reactor Fuel Cycles, 1982 Proceedings of an International Conference organized by the British Nuclear Energy Society and co sponsored by the Royal Society of Chemistry and the Institution of Metallurgists LONDON 9 12 NOVEMBER 1981 **Status of Developments in the Back End of the Fast Reactor Fuel Cycle** International Atomic Energy

Agency, 2011 Closed fuel cycle schemes in combination with fast reactors are emerging as the key strategy for sustainable development of nuclear energy The back end fuel cycles for fast reactors and thermal reactors mainly differ with respect to the reprocessing operations This publication highlights emerging innovations and R D needs for the back end of the fast reactor fuel cycle with emphasis on reprocessing of spent mixed uranium and plutonium based ceramic and metallic fuels The publication has been prepared in collaboration with experts from Member States and will serve as a useful resource for nuclear scientists and engineers involved in fast reactor fuel development as well as reprocessing of spent nuclear fuel for sodium cooled fast reactors

Closed Nuclear Fuel Cycle with Fast Reactors Evgeny Adamov, 2022-07-18 Closed Nuclear Fuel Cycle with Fast Reactors Handbook of Russian Nuclear Power provides unique insights into research and practical activities from leading Russian experts It presents readers with unprecedented insight and essential knowledge surrounding nuclear fast reactor technologies as well as novel methods to close the nuclear fuel cycle to achieve cleaner more environmentally friendly and more efficient nuclear power Using the Proryv Project as a framework the book's contributors provide detailed descriptions of technologies in development in Russia allowing readers from around the globe to gain a thorough understanding which they can then apply to their own research and practice Nuclear engineers and technologists of fast reactors advanced reactors and fuel cycles will use this book as a guide to inform new technology development They will be able to use the experiences from the Proryv Project to drive fast reactor development with closed fuel cycles for the future Provides a presentation of new nuclear reactor and fuel cycle technologies within the unique framework of Russia's Proryv Project Presents novel technologies to close the nuclear fuel cycle to promote cleaner and more environmentally protective nuclear power Includes thorough coverage on the topic including core design coolants fuels accident protection and waste management technologies

Improving Fuel Cycle Design and Safety Characteristics of a Gas Cooled Fast Reactor Willem Frederik Geert van Rooijen, 2006 The Generation IV Forum is an international nuclear energy research initiative aimed at developing the fourth generation of nuclear reactors envisaged to enter service halfway the 21st century One of the Generation IV reactor systems is the Gas Cooled Fast Reactor GCFR the subject of study in this thesis The Generation IV reactor concepts should improve all aspects of nuclear power generation Within Generation IV the GCFR concept specifically targets sustainability of nuclear power generation The Gas Cooled Fast Reactor core power density is high in comparison to other gas cooled reactor concepts Like all nuclear reactors the GCFR produces decay heat after shut down which has to be transported out of the reactor under all circumstances The layout of the primary system

therefore focuses on using natural convection Decay Heat Removal DHR where possible with a large coolant fraction in the core to reduce friction losses

Sodium Fast Reactors with Closed Fuel Cycle Baldev Raj,P. Chellapandi,P.R. Vasudeva Rao,2015-04-15 Sodium Fast Reactors with Closed Fuel Cycle delivers a detailed discussion of an important technology that is being harnessed for commercial energy production in many parts of the world Presenting the state of the art of sodium cooled fast reactors with closed fuel cycles this book Offers in depth coverage of reactor physics materials design s

The Benefits of an Advanced Fast Reactor Fuel Cycle for Plutonium Management ,1996 The United States has no program to investigate advanced nuclear fuel cycles for the large scale consumption of plutonium from military and civilian sources The official U S position has been to focus on means to bury spent nuclear fuel from civilian reactors and to achieve the spent fuel standard for excess separated plutonium which is considered by policy makers to be an urgent international priority Recently the National Research Council published a long awaited report on its study of potential separation and transmutation technologies STATS which concluded that in the nuclear energy phase out scenario that they evaluated transmutation of plutonium and long lived radioisotopes would not be worth the cost However at the American Nuclear Society Annual Meeting in June 1996 the STATS panelists endorsed further study of partitioning to achieve superior waste forms for burial and suggested that any further consideration of transmutation should be in the context of energy production not of waste management

2048 The U S Department of Energy DOE has an active program for the short term disposition of excess fissile material and a focus area for safe secure stabilization storage and disposition of plutonium but has no current programs for fast reactor development Nevertheless sufficient data exist to identify the potential advantages of an advanced fast reactor metallic fuel cycle for the long term management of plutonium Advantages are discussed

Fast Reactors and Related Fuel Cycles S. Monti,2015 This publication presents the proceedings of an international conference in the field of fast reactors and related fuel cycle technologies The conference provided a unique forum to discuss national and international fast reactor programmes analyse new experience and advances arising from research and development programmes and identify needs to be addressed in relation to the industrial deployment of fast reactors A CD ROM with invited papers and contributed papers accompanies this publication and is available on this website The papers in these Proceedings were peer reviewed by members of the International Scientific Programme Committee Publisher s description
