The Knife Man Wendy Moore, 2007-12-18 The vivid often gruesome portrait of the 18th century pioneering surgeon and father of modern medicine John Hunter When Robert Louis Stevenson wrote his gothic horror story of Dr Jekyll and Mr Hyde he based the house of the genial doctor turned fiend on the home of John Hunter The choice was understandable for Hunter was both widely acclaimed and greatly feared From humble origins John Hunter rose to become the most famous anatomist and surgeon of the eighteenth century In an age when operations were crude extremely painful and often fatal he rejected medieval traditions to forge a revolution in surgery founded on pioneering scientific experiments Using the knowledge he gained from countless human dissections Hunter worked to improve medical care for both the poorest and the best known figures of the era including Sir Joshua Reynolds and the young Lord Byron An insatiable student of all life forms Hunter was also an expert naturalist He kept exotic creatures in his country menagerie and dissected the first animals brought back by Captain Cook from Australia Ultimately his research led him to expound highly controversial views on the age of the earth as well as equally heretical beliefs on the origins of life more than sixty years before Darwin published his famous theory Although a central figure of the Enlightenment Hunter's tireless quest for human corpses immersed him deep in the sinister world of body snatching He paid exorbitant sums for stolen cadavers and even plotted successfully to steal the body of Charles Byrne famous in his day as the Irish giant In *The Knife Man* Wendy Moore unveils John Hunter's murky and macabre world a world characterized by public hangings secret expeditions to dank churchyards and gruesome human dissections in pungent attic rooms This is a fascinating portrait of a remarkable pioneer and his determined struggle to haul surgery out of the realms of meaningless superstitious ritual and into the dawn of modern medicine

Science in fiction, geek novels, lab lit, whatever one calls them, a new generation of science novels has opened a space in which the reading public can experience and think about the powers of science to illuminate nature as well as to generate and mitigate social change and risks. *Under the Literary Microscope* examines the implications of the discourse taking place in and around this creative space. Exploring works by authors as disparate as Barbara Kingsolver, Richard Powers, Ian McEwan, Ann Patchett, Margaret Atwood and Michael Crichton, these essays address the economization of scientific institutions, ethics, risk and gender disparity in scientific work, the reshaping of old stereotypes of scientists, science in an evolving sci-fi genre and reader reception and potential contributions of the novels to public understandings of science. *Under the Literary Microscope* illuminates the new ways in which fiction has been grappling with scientific issues from climate change and pandemics to artificial intelligence and genomics and makes a valuable addition to both contemporary literature and science studies courses. In addition to the editors, the contributors include Anna Auguscik, Jay Clayton, Carol Colatrella, Sonja F. Cker, Raymond Haynes, Luz Mar a Hernandez Nieto, Emanuel Herold, Karin Hoepker, Anton Kirchhofer, Antje Kley, Natalie Roxburgh, Uwe Schimank, Sherryl Vint and Peter Weingart. Making Scientific Instruments in the Industrial Revolution A.D. Morrison-Low, 2017-03-02. At the start of the Industrial Revolution it appeared that most scientific instruments were made and sold in London but by the time of the Great Exhibition in 1851 a number of provincial firms had the self-confidence to exhibit their products in London to an international audience. How had this change come about and why? This book looks at the four main and two lesser English centres known for instrument production outside the capital: Birmingham, Liverpool, Manchester and Sheffield along with the older population centres in Bristol and York. Making wide use of new sources, Dr Morrison-Low, curator of history of science at the

National Museums of Scotland charts the growth of these centres and provides a characterisation of their products. New information is provided on aspects of the trade especially marketing techniques, sources of materials, tools and customer relationships. From contemporary evidence she argues that the principal output of the provincial trade, with some notable exceptions, must have been sent into the London marketplace anonymously and at the cheaper end of the market. She also discusses the structure and organization of the provincial trade and looks at the impact of new technology imported from other closely allied trades. By virtue of its approach and subject matter the book considers aspects of economic and business history, gender and the family, the history of science and technology, material culture and patterns of migration. It contains a myriad of stories of families and firms of entrepreneurs and customers and of organizations and arms of government. In bringing together this wide range of interests, Dr Morrison Low enables us to appreciate how central the making, selling and distribution of scientific instruments was for the Industrial Revolution.
