Philosophical Chemistry Manuel DeLanda, 2015-05-21 Philosophical Chemistry furthers Manuel DeLanda s revolutionary intervention in the philosophy of science and science studies Against a monadic and totalizing understanding of science DeLanda s historicizing investigation traces the centrality of divergence specialization and hybridization through the fields and subfields of chemistry The strategy followed uses a series of chemical textbooks separated from each other by fifty year periods 1750 1800 1850 and 1900 to follow the historical formation of consensus practices The three chapters deal with one subfield of chemistry in the century in which it was developed eighteenth century inorganic chemistry nineteenth century organic chemistry and nineteenth century physical chemistry This book creates a model of a scientific field capable of accommodating the variation and differentiation evident in the history of scientific practice DeLanda proposes a model that is made of three components a domain of phenomena a community of practitioners and a set of instruments and techniques connecting the community to the domain Philosophical Chemistry will be essential reading for those engaged in emergent radical and contemporary strands of thought in the philosophy of science and for those scholars and students who strive to practice a productive dialogue between the two disciplines
