Eighteenth Century Microscopes James B. McCormick, 1987 **Eighteenth Century Microscopes** J. B. McCormick, 1987 Mikroskop Geschichte 18 Jh **Superresolution Optical Microscopy** Barry R. Masters, 2020-03-21 This book presents a comprehensive and coherent summary of techniques for enhancing the resolution and image contrast provided by far field optical microscopes It takes a critical look at the body of knowledge that comprises optical microscopy compares and contrasts the various instruments provides a clear discussion of the physical principles that underpin these techniques and describes advances in science and medicine for which superresolution microscopes are required and are making major contributions The text fills significant gaps that exist in other works on superresolution imaging firstly by placing a new emphasis on the specimen a critical component of the microscope setup giving equal importance to the enhancement of both resolution and contrast Secondly it covers several topics not typically discussed in depth such as Bessel and Airy beams the physics of the spiral phase plate vortex beams and singular optics photoactivated localization microscopy PALM stochastic optical reconstruction microscopy STORM structured illumination microscopy SIM and light sheet fluorescence microscopy LSFM Several variants of these techniques are critically discussed Noise optical aberrations specimen damage and artifacts in microscopy are also covered The importance of validation of superresolution images with electron microscopy is stressed Additionally the book includes translations and discussion of seminal papers by Abbe and Helmholtz that proved to be pedagogically relevant as well as historically significant This book is written for students researchers and engineers in the life sciences medicine biological engineering and materials science who plan to work with or already are working with superresolution light microscopes The volume can serve as a reference for these areas while a selected set of individual chapters can be used as a textbook for a one semester undergraduate or first year graduate course on superresolution microscopy Moreover the text provides a captivating account of curiosity skepticism risk taking innovation and creativity in science and technology Good scientific practice is emphasized throughout and the author's lecture slides on responsible conduct of research are included as an online resource which will be of interest to students course instructors and scientists alike **The Little Everyman** Deborah Needleman Armintor, 2011-10-01 Eighteenth century English literature art science and popular culture exhibited an unprecedented fascination with small male bodies of various kinds Henry Fielding's Tom Thumb plays drew packed crowds while public exhibitions advertised male dwarfs as paragons of English masculinity Bawdy popular poems featured diminutive men paired with enormous women and amateur scientists anthropomorphized and gendered the minute bodies they observed under their fashionable new pocket microscopes Little men both real and imagined embodied the anxieties of a newly bourgeois English culture and were transformed to suit changing concerns about the status of English masculinity in the modern era The Little Everyman explores this strange trend by tracing the historical trajectory of the supplanting of the premodern court dwarf by a more

metaphorical and quintessentially modern little man who came to represent in miniature the historical shift in literary production from aristocratic patronage to the bourgeois fantasy of freelance authorship

Armintor's close readings of Pope Fielding Swift and Sterne highlight little recognized aspects of classic works while demonstrating how the little man became an everyman

The Knife Man Wendy Moore, 2007-12-18 The vivid often gruesome portrait of the 18th century pioneering surgeon and father of modern medicine John Hunter When Robert Louis Stevenson wrote his gothic horror story of Dr Jekyll and Mr Hyde he based the house of the genial doctor turned fiend on the home of John Hunter The choice was understandable for Hunter was both widely acclaimed and greatly feared From humble origins John Hunter rose to become the most famous anatomist and surgeon of the eighteenth century In an age when operations were crude extremely painful and often fatal he rejected medieval traditions to forge a revolution in surgery founded on pioneering scientific experiments Using the knowledge he gained from countless human dissections Hunter worked to improve medical care for both the poorest and the best known figures of the era including Sir Joshua Reynolds and the young Lord Byron An insatiable student of all life forms Hunter was also an expert naturalist He kept exotic creatures in his country menagerie and dissected the first animals brought back by Captain Cook from Australia Ultimately his research led him to expound highly controversial views on the age of the earth as well as equally heretical beliefs on the origins of life more than sixty years before Darwin published his famous theory Although a central figure of the Enlightenment Hunter's tireless quest for human corpses immersed him deep in the sinister world of body snatching He paid exorbitant sums for stolen cadavers and even plotted successfully to steal the body of Charles Byrne famous in his day as the Irish giant In *The Knife Man* Wendy Moore unveils John Hunter's murky and macabre world a world characterized by public hangings secret expeditions to dank churchyards and gruesome human dissections in pungent attic rooms This is a fascinating portrait of a remarkable pioneer and his determined struggle to haul surgery out of the realms of meaningless superstitious ritual and into the dawn of modern medicine

Light and Video Microscopy Randy O. Wayne, 2013-12-16 The purpose of this book is to provide the most comprehensive easy to use and informative guide on light microscopy Light and Video Microscopy will prepare the reader for the accurate interpretation of an image and understanding of the living cell With the presentation of geometrical optics it will assist the reader in understanding image formation and light movement within the microscope It also provides an explanation of the basic modes of light microscopy and the components of modern electronic imaging

systems and guides the reader in determining the physicochemical information of living and developing cells which influence interpretation. Brings together mathematics, physics and biology to provide a broad and deep understanding of the light microscope. Clearly develops all ideas from historical and logical foundations. Laboratory exercises included to assist the reader with practical applications. Microscope discussions include bright field microscope, dark field microscope, oblique illumination, phase contrast microscope, photomicrography, fluorescence microscope, polarization microscope, interference microscope, differential interference microscope and modulation contrast microscope. Whitaker's Book List, 1988 *Dagli Artigiani Ai Naturalisti* Dario Generali, Marc Ratcliff, 2007 *Under the Literary Microscope* Sina Farzin, Susan M. Gaines, Roslynn D. Haynes, 2021-04-20. Science in fiction, geek novels, lab lit, whatever one calls them, a new generation of science novels has opened a space in which the reading public can experience and think about the powers of science to illuminate nature as well as to generate and mitigate social change and risks. *Under the Literary Microscope* examines the implications of the discourse taking place in and around this creative space. Exploring works by authors as disparate as Barbara Kingsolver, Richard Powers, Ian McEwan, Ann Patchett, Margaret Atwood and Michael Crichton, these essays address the economization of scientific institutions, ethics, risk and gender disparity in scientific work, the reshaping of old stereotypes of scientists, science in an evolving sci-fi genre and reader reception and potential contributions of the novels to public understandings of science. *Under the Literary Microscope* illuminates the new ways in which fiction has been grappling with scientific issues from climate change and pandemics to artificial intelligence and genomics and makes a valuable addition to both contemporary literature and science studies courses. In addition to the editors, the contributors include Anna Auguscik, Jay Clayton, Carol Colatrella, Sonja F. Cker, Raymond Haynes, Luz Mar a Hernandez Nieto, Emanuel Herold, Karin Hoepker, Anton Kirchhofer, Antje Kley, Natalie Roxburgh, Uwe Schimank, Sherryl Vint and Peter Weingart. Guide to Sources for Agricultural and Biological Research J. Richard Blanchard, Lois Farrell, 2023-07-28

Making Scientific Instruments in the Industrial Revolution A.D. Morrison-Low, 2017-03-02. At the start of the Industrial Revolution it appeared that most scientific instruments were made and sold in London but by the time of the Great Exhibition in 1851 a number of provincial firms had the self-confidence to exhibit their products in London to an international audience. How had this change come about and why? This book looks at the four main and two lesser English centres known for instrument production outside the capital: Birmingham, Liverpool, Manchester and Sheffield along with the older population centres in Bristol and York. Making wide use of new sources, Dr Morrison-Low, curator of history of science at the

National Museums of Scotland charts the growth of these centres and provides a characterisation of their products. New information is provided on aspects of the trade especially marketing techniques, sources of materials, tools and customer relationships. From contemporary evidence she argues that the principal output of the provincial trade, with some notable exceptions, must have been into the London marketplace anonymously and at the cheaper end of the market. She also discusses the structure and organization of the provincial trade and looks at the impact of new technology imported from other closely allied trades. By virtue of its approach and subject matter the book considers aspects of economic and business history, gender and the family, the history of science and technology, material culture and patterns of migration. It contains a myriad of stories of families and firms of entrepreneurs and customers and of organizations and arms of government. In bringing together this wide range of interests, Dr Morrison Low enables us to appreciate how central the making, selling and distribution of scientific instruments was for the Industrial Revolution.
