Routledge Handbook of Evidence-Based Criminal Justice Practices

Edelyn Verona, Bryanna Fox, 2023-10-31 Now more than ever the criminal justice system and the programs policies and practices within it are subject to increased public scrutiny due to well founded concerns over effectiveness fairness and potential unintended consequences One of the best means to address these concerns is to draw upon evidence based approaches demonstrated to be effective through empirical research rather than through anecdote standard practice or professional experience alone National Institute of Justice 2011 The goal of this book is to describe the most useful actionable and evidence based solutions to many of the most pressing questions in the criminal justice system today Specifically this edited volume contains brief and accessible summaries of the best available research alongside detailed descriptions of evidence based practices across different areas of the criminal justice system It is written so that practitioners and researchers alike can use the text as reference tool in their work and in training the new generation of individuals working to improve the system Researchers and practitioners in many areas of criminal justice crime prevention policing courts prosecution defendants judges corrections sanctions and sentencing can reference specific chapters in this book to guide their policy and practice decisions Although theory is a guide for the practices described the chapters will address practical issues in implementation and action This book overcomes the limitations of previous criminal justice practice books in that it is written as a practice resource and reference guide and spans practices and policies across different sectors of the criminal justice system from prevention to policing to sanctions and corrections Each chapter contains a list of action items based upon the best available scientific research that can be implemented in practice to address key issues and long standing challenges in the criminal justice system

Reforming Juvenile Justice National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Law and Justice, Committee on Assessing Juvenile Justice Reform, 2013-06-22

Adolescence is a distinct yet transient period of development between childhood and adulthood characterized by increased experimentation and risk taking a tendency to discount long term consequences and heightened sensitivity to peers and other social influences A key function of adolescence is developing an integrated sense of self including individualization

separation from parents and personal identity Experimentation and novelty seeking behavior such as alcohol and drug use unsafe sex and reckless driving are thought to serve a number of adaptive functions despite their risks Research indicates that for most youth the period of risky experimentation does not extend beyond adolescence ceasing as identity becomes settled with maturity Much adolescent involvement in criminal activity is part of the normal developmental process of identity formation and most adolescents will mature out of these tendencies Evidence of significant changes in brain structure and function during adolescence strongly suggests that these cognitive tendencies characteristic of adolescents are associated with biological immaturity of the brain and with an imbalance among developing brain systems This imbalance model implies dual systems one involved in cognitive and behavioral control and one involved in socio emotional processes Accordingly adolescents lack mature capacity for self regulations because the brain system that influences pleasure seeking and emotional reactivity develops more rapidly than the brain system that supports self control This knowledge of adolescent development has underscored important differences between adults and adolescents with direct bearing on the design and operation of the justice system raising doubts about the core assumptions driving the criminalization of juvenile justice policy in the late decades of the 20th century It was in this context that the Office of Juvenile Justice and Delinquency Prevention OJJDP asked the National Research Council to convene a committee to conduct a study of juvenile justice reform The goal of Reforming Juvenile Justice A Developmental Approach was to review recent advances in behavioral and neuroscience research and draw out the implications of this knowledge for juvenile justice reform to assess the new generation of reform activities occurring in the United States and to assess the performance of OJJDP in carrying out its statutory mission as well as its potential role in supporting scientifically based reform efforts

Evidence-Based Practice in Juvenile Justice Peter Greenwood, 2013-10-17 Over the past 15 years evidence based practice in juvenile justice has moved from a concept to a full blown practice in a number of states They have used research based principles and programs to completely reorganize their system for treating juveniles reduce crime and recidivism and saved money in the process Evidence Based Practice in Juvenile Justice describes the major players in this transformative process the particular role they play in moving research to practice and provides recommendations for applying this research in other locations It will be of key interest to researchers in Criminology and Criminal Justice with a focus on Juvenile Justice or Juvenile Delinquency or related fields such as Public Policy and Social Work as well as policy makers and practitioners working in the juvenile justice system
