

Soil, land and climate change

Soil contains significant amounts of carbon and nitrogen, which can be released into the atmosphere depending on how we use the land. Clearing or planting forests, the melting of permafrost can tilt the greenhouse gas emission balance one way or the other. Climate change can also substantially alter what farmers can produce and where.

Effects of Land-Use Change on Atmospheric CO₂ Concentrations Virginia H. Dale, 2012-12-06 Roger C Dahlman
Environmental Sciences Division U S Department of Energy Washington D C The potential for humans to alter Earth s atmosphere has been recognized since the end of the 19th century when Arrhenius estimated that a doubling of atmospheric carbon dioxide could alter the atmospheric radiation balance and raise average global temperature Today atmospheric CO concentrations play an important part in the 2 climate change debate Sources and sinks of CO associated with land use can be 2 significant determinants of the rate and magnitude of atmospheric CO change 2 Combustion of fossil fuels and the deforestation associated with land use change both contribute CO to the atmosphere in contrast biological processes on land create 2 potential sinks for the excess CO Thus land use change and associated biological 2 processes become important elements in assessments of future atmospheric CO 2 increase land cover properties also affect the Earth s albedo which is a climate feedback

Impacts of Land-use Change on Ecosystem Services Jinyan Zhan, 2015-08-10 This book aims to systematically elaborate how land use change directly or indirectly exerts impacts on the ability of ecosystems to provide services for human society The relationship between land use ecosystem services and human well being is a hot topic and there have been some important achievements in this field but its continuing growth means that it warrants further research The unique viewpoint the scientific analysis methods and the precise language of this book make it not only a valuable guide for professors conducting research but also a reference resource to help governments make decisions on relevant policies Prof Jinyan Zhan is an associate professor at the School of Environment Beijing Normal University China

Land Use Impacts on Climate Xiangzheng Deng, Burak Güneralp, Jinyan Zhan, Hongbo Su, 2014-06-11 This book introduces a key issue in research on the climatic impact of land cover and land use changes via terrestrial biogeophysical processes The parameterization of surface processes and a systematic approach to modeling the climatic impacts of land use change are discussed respectively and can be used to improve parameterization schemes for climate numerical models and to provide a systematic method thus offering more scientific and enhanced support for research on the climatic effects of land use cover change Further based on predictions and scenario analyses of land use changes in typical zones the climatic impact of various types of changes in different areas can be simulated through climatic numerical

modeling the simulation results are suitable for use in climate mitigation land use planning urban development planning etc Thus the book is intended for researchers and professionals working in the area of meteorology systems climatic numerical modeling climate change and land use cover change as well as decision makers in meteorology and land use planning Professor Xiangzheng Deng is a senior research fellow at the Institute of Geographical Sciences and Natural Resources Research Chinese Academy of Sciences

Global Environmental Change and Land Use H.J.T.M. Haarman, Jan Verhagen, C.A. Rovers, 2003-06-30 The interaction between environmental change and human activities is complex requiring the concepts and tools of a number of disciplines for its effective analysis Land use and land cover change has only recently become a topic susceptible to scientific research as these concepts and tools have been developed and made available Rooted in a broad community concerned with global change systematic research has begun into land use systems at different scales and interactions and their links with global cycles of water nitrogen and carbon are being explored Partly based on research initiated by the Dutch National Research Programme on Global Air Pollution and Climate Change NRP this book touches upon various land use and land cover issues in relation to global environmental change In addition to the biogeochemical cycles land as a carrier for functions of economic activities food and fibre production and energy production via biomass are discussed Crucial in studying land use is human behaviour and man environment interaction at different scales Land use and land cover change is an important contributor of greenhouse gases as these activities directly interfere with the carbon nitrogen and water cycles These cycles are connected through numerous feedback loops The interface of land use and climate is essentially determined by the interaction of man and the environment Man uses land primarily to produce food a relatively small area is needed for urban development
