comprehensive condensed overview of mathematical activity in Berlin from Leibniz almost to the present day without however including biographies of living mathematicians Since many towering figures in mathematical history worked in Berlin most of the chapters of this book are concise biographies These are held together by a few survey articles presenting the overall development of entire periods of scientific life at Berlin Overlaps between various chapters and differences in style between the chap ters were inevitable but sometimes this provided opportunities to show different aspects of a single historical event for instance the Kronecker Weierstrass con troversy The book aims at readability rather than scholarly completeness There are no footnotes only references to the individual bibliographies of each chapter Still we do hope that the texts brought together here and written by the various authors for this volume constitute a solid introduction to the history of Berlin mathematics   **Principles of Data Mining and Knowledge Discovery** Luc de Raedt,Arno Siebes,2003-06-30 This book constitutes the refereed proceedings of the 5th European Conference on Principles of Data Mining and Knowledge Discovery PKDD 2001 held in Freiburg Germany in September 2001 The 40 revised full papers presented together with four invited contributions were carefully reviewed and selected from close to 100 submissions Among the topics addressed are hidden Markov models text summarization supervised learning unsupervised learning demographic data analysis phenotype data mining spatio temporal clustering Web usage analysis association rules clustering algorithms time series analysis rule discovery text categorization self organizing maps filtering reinforcemant learning support vector machines visual data mining and machine learning
