## **Electric Networks:**

Random Walks and Electric Networks Peter G. Doyle, J. Laurie Snell, 1984-12-31 Probability theory like much of mathematics is indebted to physics as a source of problems and intuition for solving these problems Unfortunately the level of abstraction of current mathematics often makes it difficult for anyone but an expert to appreciate this fact Random Walks and electric networks looks at the interplay of physics and mathematics in terms of an example the relation between elementary electric network theory and random walks where the mathematics involved is at the college level

**Detection of Corona Discharge in Electric Networks** Yevgen Sokol, Vitalii Babak, Artur Zaporozhets, Oleg Gryb, Ihor Karpaliuk, 2023-10-13 The book is devoted to the solution of the problem of determining the presence of corona discharge on electrical equipment with acoustic radiation It is shown that corona discharge leads not only to irreversible losses of electrical energy but also interferes with the transmission of high frequency signals deteriorates insulating elements can become a source of conditions for the occurrence of a destructive arc discharge and is one of the factors of changing the continuity of the electrical system as a whole The book describes the processes in a corona discharge that lead to the occurrence of acoustic waves The authors analyzed acoustic radiation from a corona discharge reproduced in laboratory conditions The received acoustic signals were processed by Fourier transform Thus the features of the spectral function which belong specifically to the corona discharge in electrical networks with industrial frequency current were determined Based on the inverse Fourier transform a simplified model of the acoustic radiation of the corona discharge was constructed The authors proposed a method for detecting the presence of a corona discharge based on the spectral characteristics of acoustic radiation Techniques were developed to determine the presence of a corona discharge for the creation of stationary and mobile devices The advantages of the method of detecting the presence of corona discharge by the acoustic spectrum are shown The method makes it possible to determine the presence of a corona discharge remotely even out of direct sight regardless of the time of day and regardless of the season The book states that determining the presence of a corona discharge is not enough it is still necessary to determine its location The method of finding the coordinates of the corona discharge as a source of sound was described Methods of searching for corona discharge coordinates with a fixed scanning device and a moving scanning device are proposed A UAV is proposed as a mobile platform for the scanning system The influence of the Doppler effect on acoustic measurements when the UAV speed changes was taken into account The authors have shown that the use of coronal discharge detection with UAVs will not only enable the prevention of coronal discharge but also increase the frequency of surface inspections This will allow timely measures to be taken to improve the reliability of the power system operation The book is intended for the researchers postgraduate students and students specialized in theory and calculations of electrical systems
