Electroluminescent Displays Yoshimasa A. Ono, 1995 **Printing Technology for Flexible Substrates** Publishing Interlingua Publishing, 2006 A huge revolution is emerging in the format and manufacturing process of electronic devices including displays brought on by the use of plastic substrates and printing technology Flexible substrates enable large displays that can be freely bent lightweight and easily transported as a result In addition the new technology has the potential of achieving various new devices such as e paper a new display medium which epitomizes the advantage of hard copy paper solar cells which are 1/10 the weight sensors that can be completely embedded in floors and personal clothing This report analyzes the latest trends in the technology and materials surrounding the manufacturing process of flexible electronic devices with the above exciting breakthrough features Flat-Panel Displays and CRTs Lawrence E. Tannas, 2012-12-06 Flat Panel Displays and CRTs a review of electronic information display devices is the first systematic and comprehensive coverage of the subject It is intended to distill our wealth of knowledge of flat panel displays and CRTs from their beginnings to the present state of the art Historical perspective theory of operation and specific applications are all thoroughly covered The field of display engineering is a multidisciplinary technical pursuit with the result that its individual disciplines suffer from a lack of communications and limited perspective Many previously developed standards for and general understanding of one technology are often inappropriate for another Care has been taken here to document the old incorporate the new and emphasize commonalities Criteria for performance have been standardized to enable an expert

in one display technology such as liquid crystals to compare his device performance with that offered by another technology such as electroluminescence This book has been written with a second purpose in mind to wit to be the vehicle by means of which a new scientist or engineer can be introduced into the display society It is organized to be tutorial for use in instructional situations The first chapters begin with first principles and definitions the middle chapters set out requirements and criteria and the last chapters give a complete description of each major technology

Handbook of Electroluminescent Materials D. R. Vij, 2004-06-01 An electroluminescent EL material is one that emits electromagnetic EM radiation in the visible or near visible range when an electric field is applied to it EL materials have a vast array of applications in the illumination and displays industries from cheap and energy efficient lighting to large high resolution flat panel displays

Electronic Information Display Technologies Terence J Nelson, John R Wullert II, 1997-02-20 This book is a comprehensive review of the present state and future prospects of the displays used in entertainment television sets and in data terminals and personal computers Such a treatment was deemed necessary because of the importance of displays in possible future communications services incorporating computer graphics and video A few main conclusions are drawn One is that modest sized flat panel displays will become commonplace where space is at a premium such as on desktops and in kitchens or bedrooms It is another matter to stretch these displays to several feet on a side however For the next five to ten years these larger displays will mostly rely on optical projection Thereafter plasma techniques could well make large area flat panel TV displays affordable

Electronic Instrument Panel Displays Ronald K Jurgen, 1998-06-01 Electronic instrument panel displays systems covers the many technical considerations of instrument panel display systems including brightness contrast temperature sensitivity space requirements color capabilities and human factors concepts As part of the Progress in Technology Electronics Series this book contains 40 technical papers written in the last eleven years on the progress of instrument panel displays and their corresponding electronic systems Papers are grouped according to display technology and present the most recent advances in that area plus several of historical interest Electronic Instrument Panel Display Systems is divided into ten sections vacuum fluorescent displays fluorescent indicator panels liquid crystal displays electroluminescent displays light emitting diode displays electroluminescent displays light emitting diode displays cathode ray tube displays head up displays virtual and holographic displays reconfigurable displays and human factors considerations
