Electron Stream Interaction With Plasmas:

Electron-Stream Interaction with Plasmas Richard J. Briggs, 1964-11-01 This study considers the instabilities that result when an electron beam is injected into a plasma A number of different models of the system are considered and all instabilities are classified according to whether they are convective instabilities amplifying waves or nonconvective absolute instabilities. The study also analyzes the instabilities in unbounded beam plasma systems and in systems of finite extent transverse to the electron stream and gives a detailed consideration of the possibility of a strong interaction with the ions in a hot electron plasma In addition the author presents mathematical criteria for identifying absolute instabilities and amplifying waves These criteria are based only on an analysis of the dispersion equation of the system and are not restricted to beam plasma systems Two things need to be said about this book the chapter on absolute and convective instabilities makes an important contribution to the field Second it should be pointed out that the theoretical results are reduced to a form which make them readily available to an experimentalist Plasma physicists and electronic engineers will be interested in **Electron Beams in a Plasma** Evgeniy G. Shustin, 2024-05-21 This book contains information on scientific research and applications of a very diverse field of low temperature plasma physics the interaction of electron beams with plasma and as a consequence of this interaction a beam plasma discharge It contains detailed descriptions of the history of the relevant research a review of experimental research of properties of the low temperature plasma with an electron beam and beam plasma discharge and presents the main results of beam plasma interaction theory Most of the book is devoted to descriptions of applications of the plasma with a beam and beam plasma discharge in a variety of fields from studies of the physics of near Earth space using active geophysical experiments to the development of materials technologies for micro and nanoelectronics and designs of plasma filled electronic devices This book will be useful as an introduction to this field for undergraduate and graduate students specializing in plasma physics as well as for other specialists in various fields of physics and technologies Fluctuations and Non-Linear Wave Interactions in Plasmas A. G. Sitenko, 2016-09-20 Fluctuations and Non linear Wave Interactions in Plasmas talks about a theory of fluctuations in a homogenous plasma The title takes into consideration non linear wave interactions. The text first presents the statistical description of plasma and then proceeds to covering non linear electrodynamic equations Next the selection deals with the electrodynamic properties of magento active plasma and waves in plasma The text also tackles non linear wave interactions along with fluctuations in plasmas The next chapter talks about the effect of non linear wave interaction on fluctuations in a plasma Chapter 8 details fluctuation dissipation theorem while Chapter 9 discusses kinetic equations The tenth chapter covers the scattering and radiation of waves and the last chapter tackles wave interaction in semi bounded plasma The book will be of great use to scientists and professionals who deals with plasmas Plasma and Current Instabilities in Semiconductors Juras Pozhela, 2017-05-03 Plasma and Current Instabilities in Semiconductors details the main ideas in the physics of plasma and

current instabilities in semiconductors. The title first covers plasma in semiconductors and then proceeds to tackling waves in plasma Next the selection details wave instabilities in plasma and drift instabilities. The text also discusses hot electrons along with the instabilities due to intervalley electron transfer The next chapters talks about avalanche and recombination instabilities The last chapter deals with plasma streams The book will be of great use to student and professional electronics engineers and technicians A Study of the Possible Uses of Plasma for Millimeter Wave Generation Robert E. Lubin, B. before Yaakobi,2012-12-06 The 7th International Workshop in the series LASER INTERACTION AND RELATED PLASMA PHENOMENA continued the high standards established by the earlier meetings in this series It was organized under the directorship of Heinrich Hora and George H Miley at the Naval Postgraduate School in Monterey California with Fred Schwirzke as the local organizer These workshops have presented many firsts in laser plasma interactions and especially in laser fusion Some presentations provided continuity with the past most represented advancements however in some workshops progress did not appear to be occurring as rapidly as in others Therefore it was a special pleasure that in the present workshop when on October 30 1985 Chiyoe Yamanaka disclosed a breakthrough in the generation of fusion neutrons with laser fusion targets The 7th Workshop also continued to represent other new fields of laser plasma interaction The progress reported was most pronounced in the fields of X ray lasers laser acceleration of particles by electrostatic double layers in plasmas and a particle beam technique to solve the geometric problem of muon catalyzed fusion The development of laser plasma interactions at medium to high laser intensities may be seen in its whole complexity from a brief review of prior

conferences At the first Workshop in 1969 a comprehensive review of the field was presented by the speakers with the opening address by N
