Golem What Everyone Should Know About Science:

The Golem Harry M. Collins, Trevor Pinch, 1998 Second edition of a very well received title which demystifies science and is highly readable on complex subjects *The Golem* Harry M. Collins, Trevor Pinch, 1994-09-22 Science it would seem is neither all good nor all bad It gives us nuclear accidents and cures for disease agricultural self sufficiency and death in space flight Harry Collins and Trevor Pinch liken science to the Golem a creature from Jewish mythology powerful yet potentially dangerous a gentle helpful creature that may yet run amok at any moment Through a series of intriguing case studies of famous and not so famous scientific episodes ranging from relativity and cold fusion to memory in worms and the sex lives of lizards the authors debunk the idea that science is the straightforward result of competent theorisation observation and experimentation Closer to the truth they suggest is the realisation that scientific certainty comes from interpreting ambiguous results within an order imposed by scientists themselves This thought provoking account will give general readers a new perspective on the place of science in society perverse but entertaining the writing is deft the stories are good and there is not a boring page Nature a must for every science student Science Reporter **The Golem** ,1993

Constructivism in Science Education Michael Matthews, 2012-12-06 Constructivism is one of the most influential theories in contemporary education and learning theory It has had great influence in science education The papers in this collection represent arguably the most sustained examination of the theoretical and philosophical foundations of constructivism yet published Topics covered include orthodox epistemology and the philosophical traditions of constructivism the relationship of epistemology to learning theory the connection between philosophy and pedagogy in constructivist practice the difference between radical and social constructivism and an appraisal of their epistemology the strengths and weaknesses of the Strong Programme in the sociology of science and implications for science education The book contains an extensive bibliography Contributors include philosophers of science philosophers of education science educators and cognitive scientists The book is noteworthy for bringing this diverse range of disciplines together in the examination of a central educational topic **The Golem at Large** Harry Collins, Trevor Pinch, 2002-05-02 Follow up volume to the very successful and widely publicised original Golem book suitable for those interested in science social science technology and history of science Copyright Libri GmbH All rights reserved A House Built on Sand Noretta Koertge, 1998 Cultural critics say that science is politics by other means arguing that the results of scientific inquiry are profoundly shaped by the ideological agendas of powerful elites They base their claims on historical case studies purporting to show the systematic intrusion of sexist racist capitalist colonialist and or professional interests into the very content of science In this hard hitting collection of essays contributors offer crisp and detailed critiques of case studies offered by the cultural critics as evidence that scientific results tell us more about social context than they do about the natural world Pulling no punches they identify numerous crude factual blunders e g that Newton never performed any experiments and egregious errors of omission such as

the attempt to explain the slow development of fluid dynamics solely in terms of gender bias Where there are positive aspects of a flawed account or something to be learned from it they do not hesitate to say so Their target is shoddy scholarship

Comprising new essays by distinguished scholars of history philosophy and science this book raises a lively debate to a new level of seriousness *History of Psychiatry and Medical Psychology* Edwin R. Wallace, John Gach, 2010-04-13 Most of the prefatory issues are extensively elaborated upon in the Prolegomenon which also contains the complete references to the texts and authors discussed below Nevertheless the Preface would be grossly incomplete without touching on some of these issues books and scholars Too many of this book's chapters e.g. Mora's Marx's D.B. Weiner's examine and reference important earlier as well as contemporary general histories of psychiatry and specialized monographs in German French Italian and Spanish Also in his 1968 Short History of Psychiatry discussed below Ackerknecht pp xi xii references important nineteenth and earlier twentieth century psychiatric histories in English French and German Such citations will of course not be repeated here Finally thanks to several publishers re- editions of dozens of classical psychiatric texts one can consult their bibliographies as well See Prolegomenon for references to these splendid series In a rough and ready sense medical history began in classical Greece for example On Ancient Medicine While traditionally included in the Hippocratic corpus this text seems more likely to have been written by a non or even anti Hippocratic doctor Moreover the Hippocratic and other schools were hardly as secular as we now suppose On Epilepsy for example does not so much declare the prevalent denotation of it as the sacred disease erroneous as it does that it is no more nor less sacred than any other disease *Beyond the Science Wars* Ullica Segerstrale, 2000-08-03 Beyond the Science Wars offers a broad contextualization of the Science Wars an ongoing debate between scientists and social scientists over the nature and meaning of science from interdisciplinary sociological historical scientific political and cultural perspectives Beyond providing an understanding of the conflict itself this book presents the comments of two science and technology studies STS founding fathers Bernard Barber and John Ziman a scientist's protest that STS has abandoned its original mission a historian's view of the fluctuating social support for science and a sociologist's analysis of the motives of anti antiscience warriors In addition an STS statesman discusses ongoing structural changes in science a sociologist sorts out different views of objectivity and an STS veteran from the Science Wars brings us tales from the front and evaluates the meaning of recent events Contributors include Bernard Barber Henry H. Bauer Valery Cholakov Stephan Fuchs Steve Fuller Ullica Segerstrale and John Ziman
