Electric and Electromagnetic Stimulation of Bone Growth Th. J. G. van Rens, 1985      EPA-600/9 , 1981-03

Mechanistic Approaches to Interactions of Electric and Electromagnetic Fields with Living Systems Martin Blank, E.

Findl, 2013-11-11 Although there is general agreement that exogenous electric and electromagnetic fields influence and modulate the properties of biological systems there is no consensus regarding the mechanisms by which such fields operate. It is the purpose of this volume to bring together and examine critically the mechanistic models and concepts that have been proposed. We have chosen to arrange the papers in terms of the level of biological organization emphasized by the contributors. Some papers overlap categories but the progression from ions and membrane surfaces through macromolecules and the membrane matrix to integrated systems establishes a mechanistic chain of causality that links the basic interactions in the relatively well understood simple systems to the complex living systems where all effects occur simultaneously. The backgrounds of the invited contributors include biochemistry, biophysics, cell biology, electrical engineering, electrochemistry, electrophysiology, medicine, and physical chemistry. As a result of this diversity, the mechanistic models reflect the differing approaches used by these disciplines to explain the same phenomena. Areas of agreement define the common ground while the areas of divergence provide opportunities for refining our ideas through further experimentation. To facilitate the interaction between the different points of view, the authors have clearly indicated those published observations that they are trying to explain, i.e. the experiments that have been critical in their thinking. This should establish a consensus regarding important observations. In the discussion of theories      Biological Effects and Dosimetry of Static and ELF Electromagnetic Fields Martino Gandolfo, S.M. Michaelson, A. Rindi, 2013-03-09 The editors are pleased to present these Proceedings of the V Course of the International School of Radiation Damage and Protection of the E Majorana Centre held in Erice, Italy, in November 1983. The lectures and discussions among leading scientists in various disciplines of physics, engineering, biophysics, cellular biology, physiology, and medicine from 11 countries are included in this compilation. In this volume we have attempted to explore all aspects of the interaction of static and Extremely Low Frequency (ELF) 0-300 Hz electric and magnetic fields with biological tissue systems and whole organisms. We considered dosimetry and what is known or presumed concerning basic interactions, responses from the cellular and molecular level to the whole organism. Discussions of medical applications as well as epidemiologic investigations related to high voltage transmission were held with critiques of methodologies used and recommendations for future approaches. Consideration was also given to the necessity and principles of setting protection standards for man and the environment. We believe this is the first attempt to put all this information together into one volume to provide perspective for understanding the influence of static and ELF electric and magnetic fields on biological systems. We hope our attempts were successful. Martino Gandolfo, Sol M. Michaelson, Alessandro Rindi.
