Transforming the Countryside Paul Brassley, Jeremy Burchardt, Karen Sayer, 2016-11-25 It is now almost impossible to conceive of life in western Europe either in the towns or the countryside without a reliable mains electricity supply By 1938 two thirds of rural dwellings had been connected to a centrally generated supply but the majority of farms in Britain were not linked to the mains until sometime between 1950 and 1970 Given the significance of electricity for modern life the difficulties of supplying it to isolated communities and the parallels with current discussions over the provision of high speed broadband connections it is surprising that until now there has been little academic discussion of this vast and protracted undertaking This book fills that gap It is divided into three parts The first on the progress of electrification explores the timing and extent of electrification in rural England Wales and Scotland the second examines the effects of electrification on rural life and the rural landscape and the third makes comparisons over space and time looking at electrification in Canada and Sweden and comparing electrification with the current problems of rural broadband
