Energy-aware Scheduling on Multiprocessor Platforms Dawei Li, Jie Wu, 2012-10-19

Multiprocessor platforms play important roles in modern computing systems and appear in various applications ranging from energy limited hand held devices to large data centers As the performance requirements increase energy consumption in these systems also increases significantly Dynamic Voltage and Frequency Scaling DVFS which allows processors to

dynamically adjust the supply voltage and the clock frequency to operate on different power energy levels is considered an effective way to achieve the goal of energy saving This book surveys existing works that have been on energy aware task scheduling on DVFS multiprocessor platforms Energy aware scheduling problems are intrinsically optimization problems the formulations of which greatly depend on the platform and task models under consideration Thus Energy aware Scheduling on Multiprocessor Platforms covers current research on this topic and classifies existing works according to two key standards namely homogeneity heterogeneity of multiprocessor platforms and the task types considered Under this classification other sub issues are also included such as slack reclamation fixed dynamic priority scheduling partition based global scheduling and application specific power consumption etc

Handbook of Energy-Aware and Green Computing - Two Volume Set Ishfaq Ahmad, Sanjay Ranka, 2016-02-03 Implementing energy efficient CPUs and peripherals as well as reducing resource consumption have become emerging trends in computing As computers increase in speed and power their energy issues become more and more prevalent The need to develop and promote environmentally friendly computer technologies and systems has also come to the forefront

Deterministic Network Calculus Anne Bouillard, Marc Boyer, Euriell Le Corronc, 2018-12-18 Deterministic network calculus is a theory based on the min plus algebra Its aim is to compute worst case performance bounds in communication networks Our goal is to provide a comprehensive view of this theory and its recent advances from its theoretical foundations to its implementations The book is divided into three parts The first part focuses on the min plus framework and its algorithmic aspects The second part defines the network calculus model and analyzes one server in isolation Different service and scheduling policies are discussed particularly when data is packetized The third part is about network analyses Pay burst only once and pay multiplexing only once phenomena are exhibited and different analyses are proposed and compared This includes the linear programming approaches that compute tight performance bounds Finally some partial results on the stability are detailed
