Embryology Of Dolphins Staging And Ageing Of Embryos And Fetuses Of Some Cetaceans:

Embryology of Dolphins Oldrich Sterba, Milan Klima, Bernd Schildger, The rapid development of molecular biology and genetics has led to renewed interest in embryology comparative embryology and studies of the relations between ontogeny and phylogeny In fact genes have been identified which are involved in the formation of shapes and structures and it is becoming apparent that their primary morphological expressions are conspicuously similar in different species The primarily identical shapes do not become diversified until advanced individualization of embryos and it is here that it is possible to employ the knowledge of comparative embryology the branch of science engaged in the study of the development and differentiation of tridimensional structures in different animal groups However comparative embryology has been neglected during the past decades as its development has appeared to have been completed In our opinion the decreased interest in comparative embryology has been caused by the fact that often the time factor was not or could not be respected In fact in the case of embryos of wild animals even their ontogenetic age and sometimes the duration of intrauterine development are unknown
