Berlot,H. Delooz,A. Gullo,2012-12-06 Trauma has assumed a prominent role in contemporary medicine as an event that can significantly influence clinical variables such as morbidity functional deficits and consequential disability and mortality Trauma is the principal cause of death in the population below 40 years of age in industrialized countries Therefore there is great interest in studying traumatic events from both the clinical and epidemiological viewpoints The importance of trauma is exemplified by the fact that in many countries the trauma patient is first treated in specialized trauma centers in which the diagnostic and treatment processes are facilitated by the 24 hour presence of personnel having interdisciplinary competencies Trauma in this context consists of any acute often unexpected condition Many of the medical difficulties associated with trauma occur in a relatively brief period that spans from the first call for help to the initiation of first aid measures A correct approach depends on the availability of experienced personnel The first measures of aid must guarantee above all the patient s survival The most critical initial phases of care to trauma patients are represented by the triad first aid triage and transport Specific morbidity indices whether anatomical functional or mixed are indispensable elements for monitoring a patient s clinical evolution The immediate availability of essential drugs is imperative to confront the clinical

situations that often present in the acute post traumatic phase Sepsis K. Reinhart,K. Eyrich,2013-06-29 Despite the progress that has been made in intensive care medicine sepsis and septic shock are still accompanied by a high mortality rate In recent years new therapeutic approaches have been developed on the basis of a better understanding of this complex condition This monograph contains contributions by well known scientists and clinicians in the fields of hygienics microbiology infectious diseases physiology surgery and intensive care medicine It provides an up to date overview of the etiology pathophysiology prevention and therapy of sepsis and its complications **Stories from the Front Line: The**

People Behind the NHS Headlines Yvonne Bennett,Christina Stead,2025-01-07 NHS Scotland appears to be in crisis Today the British media is full of headlines such as 89 year old great grandmother waits 5 hours for an ambulance These are a talking point for a day or two and then another headline of a similar ilk takes over This book examines the traumatic experiences of the elderly people whose stories make up these headlines The authors have carried out research into the effects of long waiting times for ambulances and the problems that NHS Scotland is facing through chronic staff shortages The waits and the limitations to patient care have long term implications for the patients the relatives and the staff Throughout the book we discuss iatrogenic disease harm that is occurring daily for patients visitors and staff The book concentrates on the new Glasgow hospital The Queen Elizabeth University Hospital which opened its doors in 2015 This is one of the largest hospitals in Europe and replaces 5 older Glasgow hospitals and has been beset by major problems since its opening By interviewing relatives and staff the authors have examined their experiences both during and following a traumatic event Themes found throughout the book include poor communication trauma low staff morale suicide and the problems caused by the size and design of the hospital The authors have also analysed statistics from NHS Scotland and Scottish Ambulance Service regarding waiting times and the use of agency staff The overarching goal of this book was to give a voice to those behind the statistics **Advances in Bloodstream Infection Research and Treatment: 2011**
