Freedom To Learn:

Freedom to Learn Bruce Macfarlane, 2016-08-12 The freedom of students to learn at university is being eroded by a performative culture that fails to respect their rights to engage and develop as autonomous adults Instead students are being restricted in how they learn when they learn and what they learn by the so called student engagement movement Compulsory attendance registers class contribution grading group project work and reflective learning exercises based on expectations of self disclosure and confession take little account of the rights of students or individual differences between them This new hidden university curriculum is intolerant of students who may prefer to learn informally are reticent shy or simply value their privacy Three forms of student performativity have arisen bodily participative and emotional which threaten the freedom to learn Key themes include A re imagining of student academic freedom The democratic student experience Challenging assumptions of the student engagement movement An examination of university policies and practices Freedom to Learn offers a radically new perspective on academic freedom from a student rights standpoint It analyzes the effects of performative expectations on students drawing on the distinction between negative and positive rights to re frame student academic freedom It argues that students need to be thought of as scholars with rights and that the phrase student centred learning needs to be reclaimed to reflect its original intention to allow students to develop as persons Student rights to non indoctrination reticence in choosing how to learn and in being treated like an adult ought to be central to this process in fostering a democratic rather authoritarian culture of learning and teaching at university Written for an international readership this book will be of great interest to anyone involved in higher education policy and practice drawing on a wide range of historical and contemporary literature related to sociology philosophy and higher education studies

Freedom to Learn Art Willans, Cari Williams, 2018-05-15 Ditch the behavioral charts and start teaching for universal success Disinterested students and behavioral problems are all too common in schools Yet results show that behavior charts and other reward and punishment systems simply don t work Teachers are burning out and students are failing But what can be done The secret lies in a unique combination of behavioral science neuropsychology and group dynamics When teachers get the classroom experience right students want to succeed and achieve to their potential while behavioral problems largely vanish For decades it has been widely accepted that children have motivating needs including the need to avoid pain a need for autonomy and the need to belong The authors harness these motivations into a method of interactions that increases cooperation and in which children want to succeed and help others to thrive Packed with real classroom examples and practical guidance for using the methods this guide gives teachers the tools to transform even difficult classrooms Start teaching for universal success in classroom management and academic accomplishments
