

The Freja Mission

The background of the cover is a photograph of the Freja satellite in orbit. The satellite is a complex structure with various instruments and antennas, and it is surrounded by a network of thin, white lines representing magnetic field lines. The Earth's surface is visible on the left side of the image, showing a curved horizon and a textured surface.

Freja Mission:

My Life in Space Exploration Gerhard Haerendel, 2022-09-30 This book tells the inside story of Germany's first contributions to space research by experiments with artificial plasma clouds in space. In this autobiography, Gerhard Haerendel, former director at the Max Planck Institute for Extraterrestrial Physics, describes his 60 adventurous years in space research. The narrative of exciting events covering 40 years of rocket and satellite work is underpinned with accessible accounts of the actual physical phenomena and processes involved. The reader also learns about how the goals set by a visionary astrophysicist eventually led to one of Germany's first major contributions to space research by the creation of artificial comets in the solar wind. Haerendel's efforts also led to two further satellite programs: one in partnership with Sweden focusing on the aurora borealis, the other a national German endeavor to explore the outer border of the magnetosphere. A further interesting chapter concerns his engagement in the evaluation and restructuring of eastern German Academy institutes after reunification. All readers interested in space research and its history will enjoy sharing the fascinating experiences and dramatic events that accompany the story throughout, even some spectacular failures relating to rocket campaigns.

Space Weather Fundamentals George V. Khazanov, 2016-11-17 Space weather is one of the most significant natural hazards to human life and health. Conditions of the sun and in the solar wind, magnetosphere, ionosphere, and thermosphere can influence the performance and reliability of space-borne and ground-based technological systems. If conditions in the space environment are adverse, they can cause disruption of satellite operations, communications, navigation, and electric power distribution grids, leading to a variety of socioeconomic losses. This book provides an overview of our current knowledge and theoretical understanding of space weather formation and covers all major topics of this phenomena from the sun to the Earth's ionosphere and thermosphere, thus providing a fully updated review of this rapidly advancing field. The book brings together an outstanding team of internationally recognised contributors to cover topics such as solar wind, the Earth's magnetic field, radiation belts, the aurora, spacecraft charging, orbital drag, and GPS.

The Freja Mission Rickard Lundin, Gerhard Haerendel, Sven Grahn, 2012-12-06 Freja is a joint Swedish and German satellite launched on October 6, 1992, and orbiting at 600–1750 km, covering the lower part of the auroral acceleration region. It has been designed to provide high-resolution measurements both temporal and spatial of auroral plasma characteristics. The high telemetry rate together with the 15 Mbyte distributed on-board memories allow Freja to resolve meso- and micro-scale phenomena in the 100 m range for particles and 1–10 m range for electric and magnetic fields. The UV imager resolves auroral structures of 1 km size at a time resolution of one image every 6 s. The novel plasma instruments are orders of magnitude better than any that have gone before. The Freja Mission is about the scientific objectives, instruments, and platform itself. Detailed descriptions are given of the instrumentation and the first data acquired. It is one of the very few books to contain such material in a single volume relating the instruments' design with their in-flight characteristics. For

The large scale flows for example in the magnetosphere ionosphere system involve scale lengths of kilometers to several Earth radii and temporal scales of minutes to hours We must know specific contextual answers to the questions Do the small scale waves microprocesses modify the large scale flows Do these modifications significantly affect the transport of mass momentum and energy How can such coupling processes and their influences be revealed observationally And perhaps most challenging of all how do we incorporate the microprocesses into theoretical models of larger scale space plasma transport
