Jankiraman,2007 This book deals with the basic theory for design and analysis of Low Probability of Intercept LPI radar systems The design of one such multi frequency high resolution LPI radar PANDORA is covered This work represents the first time that the topic of multi frequency radars is discussed in such detail and it is based on research conducted by the author in The Netherlands The book provides the design tools needed for development design and analysis of high resolution radar systems for commercial as well as military applications Software written in MATLAB and C is provided to guide the reader in calculating radar parameters and in ambiguity function analysis Some radar simulation software is also included      **Fundamentals of Short-range FM Radar** Igor V. *A Platform for False Data Injection in Frequency Modulated Continuous Wave Radar* Ruchir Chauhan, 2014 Radar is an acronym for RAdio Detection And Ranging In general terms it is a machine that uses radio waves for object detection in its near periphery It transmits radio waves in a known direction which when intercepted by an obstruction object are reflected by its surface and are received back at the radar system The round trip delay time along with the known velocity of radio waves gives an accurate measurement of the distance of the object from the radar system In a somewhat similar fashion some radars are even capable of measuring the velocity of this object Frequency modulated continuous wave FMCW radar is one such radar system which is a subclass of continuous wave CW radars where a continuous sinusoidal radio energy is transmitted reflected and received back at the radar system These radar systems are widely used in vehicle automation technologies such as adaptive cruise control ACC and collision avoidance systems CAS to measure the distance from the nearest vehicles and maintain a safe following distance But in designing these systems little attention has been given to security and these systems have vulnerabilities that are capable of compromising the whole purpose of making such systems In this work one such vulnerability in FMCW radar was exploited to design an attack that was capable of decreasing the apparent distance as measured by a radar system The attack was designed in such a way that there was no tampering with the radar system being attacked Instead false distance information was introduced in the return path of the transmitted radio wave by absorbing the original victim transmission and sending out a modified radio wave on the It was shown that the distance could be decreased to alarming values which at the level of the vehicle automation system results in decreasing the speed of the automobile when actually it should have increased

*Optical Frequency-Modulated Continuous-Wave (FMCW) Interferometry* Jesse Zheng, 2005-08-25 Optical interference plays a prominent role in scientific discovery and modern technology Historically optical interference was instrumental in establishing the wave nature of light Nowadays optical interference continues to be of great importance in areas such as spectroscopy and metrology Thus far the physical optics literature has discussed the interference of optical waves with the same single frequency i e homodyne interference and the interference of optical waves with two different frequencies i e heterodyne interference but it hardly ever deals with the interference of optical waves whose frequencies are continuously modulated i e frequency modulated continuous wave interference Frequency modulated continuous wave FMCW interference which was originally investigated in radar in the 1950s has been recently introduced in optics The study of optical FMCW interference not only updates our knowledge about the nature of light but also creates a new advanced technology for precision measurements This book introduces the principles applications and signal processing of optical FMCW interference The layout of this book is straightforward Chapter 1 gives a short introduction to optical FMCW interferometry by considering the historical development general concepts and major advantages provided by this new technology Chapter 2

focuses on the principles of optical FMCW interference Three different versions of optical FMCW interference sawtooth wave optical FMCW interference triangular wave optical FMCW interference and sinusoidal wave optical FMCW interference are discussed in detail Moreover multiple beam optical FMCW interference and multip wavelength optical FMCW interference are also discussed by this chapter

**Software Defined Radio Based Frequency Modulated Continuous Wave Ground Penetrating Radar** Patrick Fiske,2020 Frequency modulated continuous wave FMCW radar allows for a wide range of research applications One primary use of this technology and what is explored in this thesis is imaging in the form of ground penetrating radar To generate proper results spectral wide band reconstruction has been developed to overcome hardware limitations allowing for high resolution radar Requiring complex reconstruction algorithms the proposed method benefits greatly in terms of performance and implementation compared to other radar systems This thesis develops a wideband linearly frequency modulated radar leveraging a software defined radio SDR The modular system is capable of a tunable wideband bandwidth up to the maximum SDR ratings This high resolution system is further improved through implementation of grating side lobe suppression filters that correct for the spectral discontinuities imposed by the reconstruction These grating lobes are managed through multiple techniques to alleviate any ghost imaging or false positives associated with object detection The solution provided allows for generally non coherent devices to operate with synchronous phase giving accurate sample level measurements Various corrections are in place as mitigation of hardware transfer functions and system level noise First the system was theorized and simulated illuminating the performance of the radar Following development of the radar measurements were conducted to confirm proper and accurate object detection Further experiments were performed ensuring Ground Penetrating Radar GPR performance as designed Applications of this work include Synthetic Aperture Radar SAR imaging innovative GPR and unmanned aerial vehicle UAV systems

[Analysis of a Continuous-wave Frequency-modulated Radar Ranging System](#) David C. Martin,1986 *Frequency-Modulated Continuous-Wave Radar for Tracing Discontinuities on Transmission Lines* Björn Niclas Möhring,2023 [Modern Radar Systems](#) Hamish Meikle,2008 This revised and updated edition to the popular Artech House book Modern Radar Systems offers complete and current coverage of the subject including new material on accuracy resolution and convolution and correlation The book features more than 540 illustrations drawn in Maple V that offer a greater understanding of various waveforms and other two and three dimensional functions to help you more accurately analyze radar system performance The effects of pulse shaping on transmitter stability and spectra are discussed a topic which is becoming more and more important in the age of electromagnetic compatibility The book addresses the importance of low attenuation and reflection between the main radio frequency blocks including the use of oversized waveguides for long runs

**Frequency Modulated Continuous Wave Radar and Video Fusion for Simultaneous Localization and Mapping** Andrew Stephen Kondrath,2012 There has been a push recently to develop technology to enable the use of UAVs in GPS denied environments

As UAVs become smaller there is a need to reduce the number and sizes of sensor systems on board. A video camera on a UAV can serve multiple purposes. It can return imagery for processing by human users. The highly accurate bearing information provided by video makes it a useful tool to be incorporated into a navigation and tracking system. Radars can provide information about the types of objects in a scene and can operate in adverse weather conditions. The range and velocity measurements provided by the radar make it a good tool for navigation. FMCW radar and color video were fused to perform SLAM in an outdoor environment. A radar SLAM solution provided the basis for the fusion. Correlations between radar returns were used to estimate dead reckoning parameters to obtain an estimate of the platform location. A new constraint was added in the radar detection process to prevent detecting poorly observable reflectors while maintaining a large number of measurements on highly observable reflectors. The radar measurements were mapped as landmarks further improving the platform location estimates. As images were received from the video camera changes in platform orientation were estimated further improving the platform orientation estimates. The expected locations of radar measurements whose uncertainty was modeled as Gaussian were projected onto the images and used to estimate the location of the radar reflector in the image. The colors of the most likely reflector were saved and used to detect the reflector in subsequent images. The azimuth angles obtained from the image detections were used to improve the estimates of the landmarks in the SLAM map over previous estimates where only the radar was used.

**Millimeter Wave Radar** Christian Waldschmidt, Christina Bonfert, Timo Grebner, 2025-08-19 This open access book covers millimeter wave radar technology as used today in advanced applications such as automated driving and industrial sensor technology. Each topic is discussed from a comprehensive systems perspective thoroughly addressing both signal processing and hardware aspects along with their interconnections. After a solid introduction to the basics and applications of radar sensors the focus shifts to the fundamental operating principles of these sensors. Separate chapters then cover signal processing and hardware concepts in detail. Finally the book concludes with an in depth discussion of specialized radar techniques including imaging radar.
