It explores the multi-disciplinary nature of river channel management in relation to modern management techniques that bear the background of the entire drainage basin in mind. It uses channel restoration where appropriate and are designed to be sustainable. *River Channel Management* is divided into five sections. The Introduction outlines the need for river channel management. Retrospective Review offers an overview of twentieth century engineering methods and the ways that river channel systems operate. Realisation explains how greater understanding of river channel adjustments, channel hazards and river basin planning created a context for twenty-first century management. Requirements for Management explains and examines environmental assessment, restoration-based approaches and methods that work towards design with nature. Final Revision speculates about prospects for twenty-first century river channel management. *River Channel Management* is written for higher-level undergraduates and for postgraduates in geography, ecology, engineering, planning, geology and environmental science for professionals involved in river channel management and for staff in environmental agencies.

**Natural Wastewater Treatment Systems And Sustainability** Nicholas F Gray, 2021-10-04 This book deals with natural treatment systems and the challenges the water industry faces in dealing with sustainability and the realisation of reaching Net Zero by 2030. Surface waters are all under threat with freshwater ecosystems now facing unprecedented levels of contamination even after a century of ever stricter legislation and regulation. The increase in population and especially in urbanization without sufficient planning and investment to ensure adequate wastewater collection and treatment coupled with the need to reduce greenhouse gas emissions associated with wastewater treatment is leading to a crisis in wastewater treatment in many countries. Natural treatment systems which use plants and soil micro-organisms are very much nature-based solutions and wherever applicable might offer sustainable and low emissions options for a range of wastewater problems protecting surface waters as well as creating new habitats to support and enhance wildlife diversity. In terms of circularity, natural treatment systems have the potential to produce a staggering array of useful and valuable by-products including high-value compounds for the pharmaceutical industry. Kumar, Wetlands are amongst the world's most productive ecosystems and provide a wide array of benefits. They also provide an ecological niche for the growth of rich flora and fauna and enable the people to derive economic benefits. However, the growing population pressures, vastly changing social processes and developmental activities have put a heavy toll on wetlands around the world. Especially after the Ramsar Convention, the need for sustainable management of these valuable ecosystems is strongly felt and many positive initiatives are taken during the last decade. The Ministry of Environment and Forests, Climate Change, MoEFCC Government of India have devoted considerable efforts to wetlands and their conservation.

since the setting up of a National Committee on Wetlands in 1983 The scheme on conservation and management of wetlands was started in 1986 1987 at national level with the objective of understanding a comprehensive study and maintenance of naturalness of important wetlands like Nal Sarovar Bird Sanctuary The 1st Ramsar Site of Gujarat India Wetlands are highly dynamic systems which continuously interact with other systems and anthropogenic activities in their catchments in various ways All ecosystems interact with adjoining ecosystems in some manner which are more varied and intense in case of natural wetlands like Nal Sarovar Hydrology in this case refers to all water related features such as precipitation inflow and outflow evaporation and the resultant factors like depth and duration of water frequency and duration of flooding and the amplitude of water level changes Therefore even small changes in the hydrological characteristics of the lake bring about significant changes in the community structure and function It gives us an immense pleasure in presenting this comprehensive book on Conserving Sanctity of Nal Sarovar Bird Sanctuary Ramsar Site by Community Participatory Approach The Nal Sarovar a shallow permanent fresh water lake that sprawl at the junction of mainland of Central Gujarat and Saurashtra attracts one of the largest concentrations of migratory and resident waterfowl found in India Although it is yet to be recognized internationally the lake has been identified as priority site for intensive conservation and management of National Wetlands Mangroves and Coral Reefs Committee of the Ministry of Environment and Forests Climate Change Government of India This book embodies an in depth information on Nal Sarovar Bird Sanctuary in terms of point and non point sources of pollution nutrient budget and recycling of nutrients in water and bottom sediments planktons as indicators and markers of pollution macrophytes as indicators of quality of wetlands bioaccumulation of heavy metals in aquatic macrophytes suitability of habitat for waterfowl conservation impact of various anthropogenic pressures and conservation and site specific management strategies for sustainable use of biotic resources with suitable recommendations and mitigating measures We hope this book will be of great help to scientists teachers students wetland conservationists and managers in this field *Eco-Hydrology* Andrew J.
