Embryic And Fetal Development Reproduction In Mammals Series:

Uterine and Embryonic Factors in Early Pregnancy Jerome F. Strauss III, C. Richard Lyttle, 2012-12-06 Human reproduction is the most dynamic of processes. The events which lead to the birth of a normal healthy infant have their origin long before actual fertilization. Indeed the whole process can be looked upon as a continuum. Human fertilization and early development once sequestered in the protective environment of the fallopian tubes and uterus have now been exposed in the laboratory. These events have over time been extensively observed and catalogued in animal models. The tools of modern morphology and molecular biology have reopened issues long since considered settled as facets of early reproduction are reexplored. This volume consisting of the proceedings of a workshop on uterine and embryonic factors in early pregnancy has been designed to enhance that effort. Attention is focused largely on early embryonal development with special attention to the interrelationship between the embryo and the uterus in early pregnancy. Each of the contributing scientists brings with him or her the perspective of one specific discipline or another. The common denominator is the application of emerging techniques in modern molecular biology to problems pertaining to embryonal uterine interaction. The goal is to consider specific areas of concern in a multidisciplinary way and to reexplore the factors behind early development and implantation. Uterine complement the function of uterine macrophages immunoregulatory loops in the peri implantation period. Colony stimulating factors and interferon like factors are reviewed and their interrelationship explored. Uterine angiogenesis factors as well as embryonic growth factors are also considered. Fetal Development Jean-Pierre Lecanuet, William P.

Fifer, Norman A. Krasnegor, William P. Smotherman, 2013-06-17 Based on the presentations given by well known specialists at a recent multidisciplinary conference of developmental psychobiologists, obstetricians and physiologists this book is the first exhaustive attempt to synthesize the present scientific knowledge on fetal behavior. Utilizing a psychobiological analytic approach it provides the reader with an overview of the perspectives, hypotheses and experimental results from a group of basic scientists and clinicians who conduct research to elucidate the role of fetal behavior in development. Experimental and clinical as well as human and animal data are explored via comparative developmental analysis. The ontogeny of fetal spontaneous activity via the maturation of behavioral states and of fetal responsiveness to sensory stimulation is studied in detail. Results are provided from studies of embryonic fetal and newborn behavior in chicks, rats, sheep, primates and humans. Knowledge of fetal behavior is crucial to the obstetrician, neonatologist, developmental psychologist and even the future parents in order to follow and assess the gradual development of spontaneous responsive movements of the fetus. While assessing this important information this text also examines the neuro behavioral events taking place during the fetal period as an aid to understanding normal and pathological life span development. **Gamete and Embryo Quality** H.J.T.

Coelingh, L. Mastroianni, J., 1994-03-15 Designed as an aid for all clinicians and scientists who are currently engaged in the field of in vitro fertilization and other assisted conception techniques. The book provides a comprehensive account of gamete

and embryo quality and reflects up to date assessment of current knowledge Reproductive Physiology of Marsupials C. Hugh Tyndale-Biscoe, Marilyn Renfree, 1987-01-30 The results of this compilation of new research on the reproductive physiology of marsupials reveal much about their patterns of reproduction and evolution in comparison to monotremes and eutherians **Marshall's Physiology of Reproduction** G.E. Lamming, 2013-04-17 The most comprehensive review available today Marshall's Physiology of Reproduction is the classic reference source for teachers and researchers of animal reproduction Internationally recognised leaders in their respective fields provide an analytical synopsis of the area review current research and outline their philosophical approach to the subject Volume 3 of the fourth edition reviews the processes of pregnancy and lactation in mammals incorporating marsupials non primate eutherians and primates including man Book one covers pregnancy from ovulation to pre parturition book two reviews fetal physiology parturition and lactation The extensive coverage of the physiology of human reproduction and lactation makes this volume a particularly important reference source for researchers in human fertility control while the review of large animal reproduction is relevant to veterinary and para veterinary workers Animal Biotechnology L.A. Babiuk, J.P. Phillips, Murray Moo-Young, 2013-10-22 The advent of biotechnology has the potential to develop a variety of novel or better quality products for the treatment of a large number of diseases in livestock In addition as we understand more about the reproductive physiology of animals the potential exists to dramatically increase the productivity of animals through better therapeutics and diagnostics for the control of many infectious diseases Productivity can also be increased through animal breeding strategies including gene transfer micromanipulation of embryos and gamete sex selection As well as being a valuable reference to current knowledge in these areas this first supplement to Comprehensive Biotechnology also looks at societal concerns over the use of antibiotics and chemical residues in meat and milk products which are forcing biotechnologists to investigate more natural means of controlling infection by stimulating the animal's own immune system to combat infection The identification of a variety of cytokines which are involved in regulating immune responses provides opportunities to use the animal's natural defence mechanisms to combat many infections or increase the animal's resistance to such infections These approaches should provide tools for eventual elimination of specific diseases from counties regions or whole continents *Research Grants Index* National Institutes of Health (U.S.).
