patients associations scientists scholars and politicians this book provides a concise and comprehensive view of the limitations and dangers facing the future of innovation and scientific progress Science but Not Scientists Vernon L. Grose, 2006-10-18 The historic Science Textbook Struggle a worldwide battle about the origin of the universe life and man erupted without warning It caught the scientific illuminati completely by surprise Why Because science textbooks had become filled with wild unbelievable stories about the beginning of everything And those tales were simply not scientific The universe starting with a Big Bang life arising out of a soup of lifeless amino acids humans produced by apes those myths had only replaced ancient Greek mythology and were being passed off as scientific truths Caught in the crossfire between educators news media textbook publishers religious notables and world renowned scientists including nineteen Nobel laureates was a private citizen Father of six schoolchildren he had only one goal to prove that science never will have answers for origins He was up against the arrogance of scientists who were determined to disguise their private beliefs as being the only explanations for the origin of the universe life and man This story concludes with a great victory for objectivity with more than 200 changes being made in textbooks over the objections of the National Academy of Sciences All discussion about origins was transformed by admission that stories about them are based solely on personal views of individual scientists Remarkably 3 000 scientists around the world later signed an affirmation to assure that this issue of belief over fact in science never be repeated Wernher von Braun father of Americas space program writes in the Foreword Vernon Grose in tracing out in Science But Not Scientists his personal involvement in the vortex of these two forces illustrates one more time the humanity of scientists their likelihood of being just as prejudiced and bigoted as anyone untrained in science He properly calls for objectivity rather than scientific consensus He rightly urges that message rather than messenger should be scrutinized and tested for validity Science will be the richer and humanity the ultimate beneficiary by heeding this clarion call **Science as a Cultural Human Right** Helle Porsdam, 2022-09-27 The human right to science outlined in the 1948 Universal Declaration of Human Rights and repeated in the 1966 International Covenant on Economic Social and Cultural Rights recognizes everyone s right to share in scientific advancement and its benefits and to enjoy the benefits of scientific progress and its applications This right also requires state parties to develop and disseminate science to respect the freedom of scientific research and to recognize the benefits of international contacts and co operation in the scientific field The right to science has never been more important Even before the COVID 19 health crisis it was evident that people around the world increasingly rely on science and technology in almost every sphere of their lives from the development of medicines and the treatment of diseases to transport agriculture and the facilitation of global communication At the same time however the value of science has been under attack with some raising alarm at the emergence of post truth societies Dual use and unintended because often unforeseen consequences of emerging technologies are also perceived to be a serious risk The important role played by science and technology and the potential for dual use makes it imperative to evaluate scientific

research and its products not only on their scientific but also on their human rights merits In Science as a Cultural Human Right Helle Porsdam argues robustly for the role of the right to science now and in the future The book analyzes the legal stature of this right the potential consequences of not establishing it as fundamental and its connection to global cultural rights It offers the basis for defending the free and responsible practice of science and ensuring that its benefits are spread globally
