and networking is assumed Financial Success in the Year 2000 and Beyond Larry Chambers, 2024-11-01 Today's investor faces a much larger challenge than those of just ten years ago. The size and complexities of the financial marketplace create confusion. The Dow Jones industrial average has doubled in the past two and a half years and 10,000 on the Dow is no longer a fantasy. Money keeps flooding into the market. The New York Stock Exchange daily trading volume is four times that of 1990. *Financial Success in the Year 2000 and Beyond* covers financial planning and asset management, the fastest growing segments of the financial services industry. In the old days, highly commissioned salesmen would simply tell their clients what products to buy. Today there are infinitely more choices and investment options to sort through and be concerned about. Technology has put complex investing tools into the hands of ordinary people without good advice on how to use them. Never have so many people experienced so much control over their financial futures yet felt a need for so much help. Applying lessons learned from past mistakes is hard and discouraging. Most people become investors without the wisdom of experience, getting the tests without first getting the lessons. *Financial Success in the Year 2000 and Beyond* explores virtually every aspect of financial planning and dispels many of the myths and mysteries surrounding investing and investments. The experts include Dennis R. Fletcher, CLU, ChFC, Oshkosh, WI; Joseph D. Longo, CLU, CFP, LUTCF, LIC, Troy, MI; Tom Nohr, CFP, RFC, Castro Valley, CA; Floyd L. Shilanski, Anchorage, AK; Robert Lyndon Taylor, LUTCF, Oklahoma City, OK; Michael P. Eischen, Columbus, OH; Lance A. Pelky, San Diego, CA; David W. Shepherd, RHU, ChFC, Tucson, AZ; Terry A. Vrieze, Des Moines, Iowa; Larry Rosenthal, RFC, LUTCF, Manassas, VA; William J. Bill Nelson, RFC, Cayton, OH; David S. White, Durham, NC; Mark Young, St. Lewis, MO. *Big Data over Networks* Shuguang Cui, Alfred O. Hero, III, Zhi-Quan Luo, José M. F. Moura, 2016-01-14 Utilising both key mathematical tools and state-of-the-art research results, this text explores the principles underpinning large-scale information processing over networks and examines the crucial interaction between big data and its associated communication, social, and biological networks. Written by experts in the diverse fields of machine learning, optimisation, statistics, signal processing, networking, communications, sociology, and biology, this book employs two complementary approaches: first, analysing how the underlying network constrains the upper layer of collaborative big data processing, and second, examining how big data processing may boost performance in various networks. Unifying the broad scope of the book is the rigorous mathematical treatment of the subjects, which is enriched by in-depth discussion of future directions and numerous open-ended problems that conclude each chapter. Readers will be able to master the fundamental principles for dealing with big data over large systems, making it essential reading for graduate students, scientific researchers, and industry practitioners alike. **Proceedings of Integrated Intelligence Enable Networks and Computing** Krishan Kant Singh, Mer, Vijay Bhaskar Semwal, Vishwanath Bijalwan, Rubén González Crespo, 2021-04-23 This book presents best selected research papers presented at the First International Conference on Integrated Intelligence Enable Networks and Computing (IIENC 2020) held from May 25 to May 27, 2020, at the Institute of Technology Gopeshwar, India. Towards Very Large Knowledge Bases N. J. I. Mars, 1995 In the early days of artificial intelligence it was widely believed that powerful computers would in the future enable mankind to solve many real world problems through the use of very general inference procedures and very little domain specific knowledge With the benefit of hindsight this view can now be called quite naive The field of expert systems which developed during the early 1970s embraced the paradigm that Knowledge is Power even very fast computers require very large amounts of very specific knowledge to solve non trivial problems Thus the field of large knowledge bases has emerged
