couverture     Pets Erica Fudge, 2014-12-05 When I play with my cat who knows if I am not a pastime to her more than she is to me Michel de Montaigne Why do we live with pets Is there something more to our relationship with them than simply companionship What is it we look for in our pets and what does this say about us as human beings In this fascinating book Erica Fudge explores the nature of this most complex of relationships and the difficulties of knowing what it is that one is living with when one chooses to share a home with an animal Fudge argues that our capacity for compassion and ability to live alongside others is evident in our relationships with our pets those paradoxical creatures who give us a sense of comfort and security while simultaneously troubling the categories human and animal For what is a pet if it isn't a fully fledged member of the human family This book proposes that by crossing over these boundaries pets help construct who it is we think we are Drawing on the works of modern writers such as J M Coetzee Elizabeth Marshall Thomas and Jacques Derrida Fudge shows how pets have been used to think with and to undermine our easy conceptions of human animal and home Indeed *Pets* shows our obsession with domestic animals that reveals many of the paradoxes contradictions and ambiguities of life Living with pets provides thought provoking perspectives on our notions of possession and mastery mutuality and cohabitation love and dominance We might think of pets as simply happy loved additions to human homes but as this captivating book reveals perhaps it is the pets that make the home and without pets perhaps we might not be the humans we think we are For anyone who has ever wondered like Montaigne what their cat is thinking it will be illuminating reading

*Keeping Those Words in Mind* Max Louwerse, 2021-07-15 How can humans keep thousands of words in mind and have no difficulty understanding trillions of sentences The answer to this question might lie in parents teaching their children language skills or in the human brain which may be equipped with a language instinct or maybe in impressive memory skills that link words to their perceptual information Undoubtedly there is some truth to some of these explanations But one answer perhaps the most important answer has been largely ignored Keeping Those Words in Mind tries to remedy this oversight Linguist and cognitive psychologist Max Louwerse PhD argues that understanding language is not just possible because of memory brains environment and computation but because of the patterns in the sequence of sounds and words themselves He demonstrates that what seems to be an arbitrary communication system with arbitrary characters and sounds that become words and arbitrary meanings for those words actually is a well organized system that has evolved over tens of thousands of years to make communication as efficient as it

is What is needed for humans to acquire language is for humans to recognize and discover the patterns in our communication system By examining how our brains process language and find patterns the intricacies of the language system itself and even scientific breakthroughs in computer science and artificial intelligence Keeping Those Words in Mind brings a brand new and interdisciplinary explanation for our ability to extract meaning from language **Hearings and Reports on**

Bunge,2012-12-06 In this Introduction we shall state the business of both descriptive and normative epistemology and shall locate them in the map of learning This must be done because epistemology has been pronounced dead and methodology nonexistent and because when acknowledged at all they are often misplaced 1 DESCRIPTIVE EPISTEMOLOGY The following problems are typical of classical epistemology i What can we know ii How do we know iii What if anything does the subject contribute to his knowledge iv What is truth v How can we recognize truth vi What is probable knowledge as opposed to certain knowledge vii Is there a priori knowledge and if so of what viii How are knowledge and action related ix How are knowledge and language related x What is the status of concepts and propositions In some guise or other all of these problems are still with us To be sure if construed as a demand for an inventory of knowledge the first problem is not a philosophical one any more than the question What is there But it is a genuine philosophical problem if construed thus What kinds of object are knowable and which ones are not However it is doubtful that philosophy can offer a correct answer to this problem without the help of science and technology For example only these disciplines can tell us whether man can know not only phenomena appearances but also noumena things in themselves or self existing objects

*Thinking, Fast and Slow* by Daniel Kahneman - A 30-minute Summary Instaread Summaries,2014-10-21 PLEASE NOTE This is a summary of the book and NOT the original book Thinking Fast and Slow by Daniel Kahneman A 30 minute Summary Inside this Instaread Summary Overview of the entire book Introduction to the important people in the book Summary and

analysis of all the chapters in the book Key Takeaways of the book A Reader's Perspective Preview of this summary Introduction In this book Daniel Kahneman hopes to identify and understand errors of judgment and choice He wants to provide a richer and more accurate vocabulary to discuss these errors He worked with his colleague Amos Tversky doing research on intuitive statistics The two of them had already concluded in an earlier seminar that their own intuitions were lacking Their subjective judgments were biased they were too willing to believe research findings based on inadequate evidence and they collected too few observations in their own research The goal of their study was to find out whether other researchers had this problem as well Kahneman and Tversky found that participants in their studies ignored the relevant statistical facts and relied exclusively on resemblance They used resemblance as a heuristic rule of thumb to simplify things when making a difficult judgment Relying on this heuristic caused predictable biases systematic errors in their predictions The research partners learned that people tend to determine the importance of issues by how easy they are retrieved from their memory This is brought about in large part by the extent of coverage of the issues in the media Kahneman presents a view of how the mind works drawing on recent developments in cognitive and social psychology He explains the differences between fast intuitive thinking and slow deliberate thinking People have a limitation in their minds an excessive confidence in what they think they know
