**Education, Social Status, and Health** John Mirowsky, 2017-09-08 Education forms a unique dimension of social status with qualities that make it especially important to health It influences health in ways that are varied present at all stages of adult life cumulative self amplifying and uniformly positive Educational attainment marks social status at the beginning of adulthood functioning as the main bridge between the status of one generation and the next and also as the main avenue of upward mobility It precedes the other acquired social statuses and substantially influences

them including occupational status earnings and personal and household income and wealth Education creates desirable outcomes because it trains individuals to acquire evaluate and use information It teaches individuals to tap the power of knowledge Education develops the learned effectiveness that enables self direction toward any and all values sought including health For decades American health sciences has acted as if social status had little bearing on health The ascendance of clinical medicine within a culture of individualism probably accounts for that omission But research on chronic diseases over the last half of the twentieth century forced science to think differently about the causes of disease Despite the institutional and cultural forces focusing medical research on distinctive proximate causes of specific diseases researchers were forced to look over their shoulders back toward more distant causes of many diseases Some fully turned their orientation toward the social status of health looking for the origins of that cascade of disease and disability flowing daily through clinics Why is it that people with higher socioeconomic status have better health than lower status individuals The authors who are well recognized for their strength in survey research on a broad national scale draw on findings and ideas from many sciences including demography economics social psychology and the health sciences People who are well educated feel in control of their lives which encourages and enables a healthy lifestyle In addition learned effectiveness a practical end of that education enables them to find work that is autonomous and creative thereby promoting good health

Education, Social Background and Cognitive Ability Gary N. Marks, 2013-10-23 Are socioeconomic inequalities in education declining Is socioeconomic background becoming less important for people's occupational class or status How important is cognitive ability for education and later occupational outcomes How do countries differ in the importance of socioeconomic background for education and work Gary N Marks argues that in western industrialized countries pervasive views that socioeconomic background or class background has strong and unchanging relationships with education and later socioeconomic outcomes resistant to policy and social change are unfounded Marks provides a large amount of evidence from many countries showing that the influence of socioeconomic background for education is moderate and most often declining and socioeconomic background has only very weak impacts on adults occupation and earnings after taking into account education and cognitive ability Furthermore Marks shows that cognitive ability is a more powerful influence than socioeconomic background for educational outcomes and that in addition to its indirect effects through education has a direct effect on occupation and earnings Its effects cannot be dismissed as simply another aspect of socioeconomic background nor do the usual criticisms of cognitive ability apply The declining effects for socioeconomic background and the importance of cognitive ability support several of the contentions of modernization theory The book contributes to a variety of debates within sociology quantitative and qualitative approaches explanatory and non explanatory theory the relationship between theory and empirical research the role of political ideology in research sociology as a social science and sociology's contribution to knowledge about contemporary societies It will appeal to professionals in the fields of education and

sociology as well as postgraduate students and academics involved in the debate

*Education in the Best Interests of the Child* R. Brian Howe, Katherine Covell, 2013-02-07 A large body of research in disciplines from sociology and policy studies to neuroscience and educational psychology has confirmed that socioeconomic status remains the most powerful influence on children's educational outcomes. Socially disadvantaged children around the world disproportionately suffer from lower levels of educational achievement which in turn leads to unfavourable long term outcomes in employment and health. *Education in the Best Interests of the Child* addresses this persistent problem which violates not only the principle of equal educational opportunity but also the broader principle of the best interests of the child as called for in the UN Convention on the Rights of the Child. Building on the children's rights work accomplished in their previous book *Empowering Children*, Brian Howe and Katherine Covell identify three types of reform that can significantly close the educational achievement gap. Their findings make an important argument for stronger and more comprehensive action to equalize educational opportunities for disadvantaged children

*Advances in the Conceptualization of the Stress Process* William R. Avison, Carol S. Aneshensel, Scott Schieman, Blair Wheaton, 2009-10-21 In 1981 Leonard Pearlin and his colleagues published an article that would radically shift the sociological study of mental health from an emphasis on psychiatric disorder to a focus on social structure and its consequences for stress and psychological distress. Pearlin et al 1981 proposed a deceptively simple conceptual model that has now influenced sociological inquiry for almost three decades. With his characteristic penchant for reconsidering and elaborating his own ideas, Pearlin has revisited the stress process model periodically over the years (Pearlin 1989, 1999; Pearlin et al 2005; Pearlin and Skaff 1996). One of the consequences of this continued theoretical elaboration of the stress process has been the development of a sociological model of stress that embraces the complexity of social life. Another consequence is that the stress process has continued to stimulate a host of empirical investigations in the sociology of mental health. Indeed, it is no exaggeration to suggest that the stress process paradigm has been primarily responsible for the growth and sustenance of sociological research on stress and mental health. Pearlin et al 1981 described the core elements of the stress process in a brief paragraph. The process of social stress can be seen as combining three major conceptual domains: the sources of stress, the mediators of stress, and the manifestations of stress. Each of these extended domains subsumes a variety of subparts that have been intensively studied in recent years.

Korean families evolved into their current shapes While the study of families can be approached in many different angles our lens focuses on families with children or young adults who are about to forge family through marriage and other means This focus reflects that delayed marriage and declined fertility are two sweeping demographic trends in Korea affecting family formation Moreover intensive parenting has characterized Korean young parents and therefore examining change and persistence in parenting provides important clues for family change in Korea This volume should be of interest not only to readers who are interested in Korea but also to those who want to understand broad family changes in East Asia in comparative perspective
