Ecosystem Dynamics of the Boreal Forest : The Kluane Project Vancouver Charles J. Krebs Professor of Zoology University of British Columbia, Edmonton Stan Boutin Professor of Zoology University of Alberta, Rudy Boonstra Professor of Physiology and Zoology University of Toronto, 2001-03-31 The boreal forest is one of the world's great ecosystems stretching across North America and Eurasia in an unbroken band and containing about 25% of the world's closed canopy forests The Kluane Boreal Forest Ecosystem Project was a 10 year study by nine of Canada's leading ecologists to unravel the impact of the snowshoe hare cycle on the plants and the other vertebrate species in the boreal forest In much of the boreal forest the snowshoe hare acts as a keystone herbivore fluctuating in 9-10 year cycles and dragging along secondary cycles in predators such as lynx and great horned owls By manipulating the ecosystem on a large scale from the bottom via fertilizer additions and from the top by predator exclosures they have traced the plant herbivore relationships and the predator prey relationships in this ecosystem to try to answer the question of what drives small mammal population cycles This study is unique in being large scale and experimental on a relatively simple ecosystem with the overall goal of defining what determines community structure in the boreal forest

Ecosystem Dynamics of the Boreal Forest Charles J. Krebs, Stan A. Boutin, Rudy Boonstra, 2001 The boreal forest is one of the world's great ecosystems stretching across North America and Eurasia in an unbroken band and containing about 25% of the world's closed canopy forests The Kluane Boreal Forest Ecosystem Project was a 10 year study by nine of Canada's leading ecologists to unravel the impact of the snowshoe hare cycle on the plants and the other vertebrate species in the boreal forest In much of the boreal forest the snowshoe hare acts as a keystone herbivore fluctuating in 9-10 year cycles and dragging along secondary cycles in predators such as lynx and great horned owls By manipulating the ecosystem on a large scale from the bottom via fertilizer additions and from the top by predator exclosures they have traced the plant herbivore relationships and the predator prey relationships in this ecosystem to try to answer the question of what drives small mammal population cycles This study is unique in being large scale and experimental on a relatively simple ecosystem with the overall goal of defining what determines community structure in the boreal forest

Ecosystem Dynamics of the Boreal Forest The Kluane Project summarizes these findings weaving new discoveries of the role of herbivores turned predators compensatory plant growth and predators eating predators with an ecological story rich in details and clear in its findings of a community where predation plays a key role in determining the fate of individuals and

populations The study of the Kluane boreal forest raises key questions about the scale of conservation required for boreal forest communities and the many mammals and birds that live there

Alaska's Changing Boreal Forest F. Stuart Chapin, Mark W. Oswood, Keith van Cleve, Leslie A. Viereck, David L. Verbyla, 2006-01-12 The boreal forest is the northern most woodland biome whose natural history is rooted in the influence of low temperature and high latitude Alaska's boreal forest is now warming as rapidly as the rest of Earth providing an unprecedented look at how this cold adapted fire prone forest adjusts to change This volume synthesizes current understanding of the ecology of Alaska's boreal forests and describes their unique features in the context of circumpolar and global patterns It tells how fire and climate contributed to the biome's current dynamics As climate warms and permafrost permanently frozen ground thaws the boreal forest may be on the cusp of a major change in state The editors have gathered a remarkable set of contributors to discuss this swift environmental and biotic transformation Their chapters cover the properties of the forest the changes it is undergoing and the challenges these alterations present to boreal forest managers In the first section the reader can absorb the geographic and historical context for understanding the boreal forest The book then delves into the dynamics of plant and animal communities inhabiting this forest and the biogeochemical processes that link these organisms In the last section the authors explore landscape phenomena that operate at larger temporal and spatial scales and integrates the processes described in earlier sections Much of the research on which this book is based results from the Bonanza Creek Long Term Ecological Research Program Here is a synthesis of the substantial literature on Alaska's boreal forest that should be accessible to professional ecologists students and the interested public

Ecology of Predator-Prey Interactions Pedro Barbosa, Ignacio Castellanos, 2005-08-11 This book addresses the fundamental issues of predator prey interactions with an emphasis on predation among arthropods which have been better studied and for which the database is more extensive than for the large and rare vertebrate predators The book should appeal to ecologists interested in the broad issue of predation effects on communities

Environmental Education and Advocacy Edward A. Johnson, Michael J. Mappin, 2005-03-03 Environmental education has often blurred the distinction between ecological science and environmental advocacy Growing public awareness of environmental problems and desire for action may be contributing to this blurring There is a need to clarify the distinction between the role of ecological science and the role of social and political values for the environment within environmental education This book addresses this need by examining the changing perspectives of ecology in education and the changing perspectives of education in environmental education Guidelines are provided for assessing the science and education perspectives within environmental education along with suggested frameworks for development of programs and resources that integrate current science education and action This book will be of interest to environmental educators ecologists interested in environmental education and curriculum and resource developers

Eighteenth-Century Naturalists of Hudson Bay Clarence Stuart Houston, Stuart Houston, Tim Ball, Mary Houston, 2003 Where Peter Newman's best selling

trilogy captured the essence of the Hudson's Bay Company HBC as a business empire Eighteenth Century Naturalists of Hudson Bay presents the scientific achievements of the company's early employees drawing largely on materials in the HBC Winnipeg archives C Stuart Houston Tim Ball and Mary Houston make amends for two centuries of neglect of these collector observers showing that fur traders in isolated trading posts on Hudson Bay were involved in some of the earliest stirrings of science on the continent and that the fur traders and Native people worked together in a remarkable symbiosis beneficial to both parties The authors show that meteorologic data and weather information recorded at the HBC trading posts over two centuries provide the largest and longest consecutive series available anywhere in North America one that can help us understand the mechanisms and amount of climate change They demonstrate that Hudson Bay is the second largest site of new bird species named by Linnaeus and reproduce some of George Edwards' colour paintings of these new species Six informative appendices reveal how the invaluable HBC archives were transferred from London England to Winnipeg correct previous misinterpretations of the collaboration and relative contributions of Thomas Hutchins and Andrew Graham use two centuries of HBC fur returns to demonstrate the ten year hare and lynx cycles tell how the swan trade almost extirpated the Trumpeter Swan explain how the Canada Goose got its name before there was a Canada and offer an extensive list of eighteenth century Cree names for birds mammals and fish Informative tables list the eighteenth century surgeons at York Factory and give names and dates for the annual supply ships

Birds of the Yukon Territory Pamela H. Sinclair, Wendy A. Nixon, Cameron D. Eckert, Nancy L. Hughes, 2011-11-01 The Yukon is a land of remarkable wilderness diverse ecosystems and profound beauty It is also home to a unique assemblage of birds As of 2002 288 bird species have been documented in the Yukon with 223 occurring regularly They occupy an amazing range of habitats from the most barren mountain peaks to lush valley bottom forests and are an integral part of the cultural heritage of Yukon First Nations people The vast areas of natural habitat with limited road access can make the study of birds challenging but are key in defining the nature of birding in the Yukon Birds of the Yukon Territory is the result of a decade long project initiated to gather and share what is known about the Yukon's birdlife Lavishly illustrated with 600 colour photographs and 223 hand drawn bird illustrations the book presents a wealth of information on bird distribution migration and breeding chronology nesting behaviour and habitat use and on conservation concerns Two hundred and eighty eight species of birds are documented including 223 regular species and 65 casual and accidental species In compiling this meticulously researched volume the authors consulted over 166 000 records in a database created by the Canadian Wildlife Service with information dating back to 1861 Sections on birds in Aboriginal culture and history and bird names in the Yukon First Nations and Inuvialuit languages enhance the book as do the numerous easily interpreted charts and graphs Destined to become a basic reference work on the avifauna of the North Birds of the Yukon Territory is a must have for bird enthusiasts and anyone interested in the natural history of the Yukon and the North

Wildlife Science Timothy E. Fulbright, David G. Hewitt, 2007-06-20 Consciously or not wildlife managers generally act

from a theoretical basis although they may not be fully versed in the details or ramifications of that theory In practice the predictions of the practitioners sometimes prove more accurate than those of the theoreticians Practitioners and theoreticians need to work together but this proves difficult

Managing Forests as Complex Adaptive Systems Christian C. Messier, Klaus J. Puettmann, K. David Coates, K. Dave Coates, 2013 This book links the emerging concepts of complexity complex adaptive system CAS and resilience to forest ecology and management It explores how these concepts can be applied in various forest biomes of the world with their different ecological economic and social settings and history Individual chapters stress different elements of these concepts based on the specific setting and expertise of the authors Regions and authors have been selected to cover a diversity of viewpoints and emphases from silviculture and natural forests to forest restoration and from boreal to tropical forests The chapters show that there is no single generally applicable approach to forest management that applies to all settings The first set of chapters provides a global overview of how complexity CAS and resilience theory can benefit researchers who study forest ecosystems A second set of chapters provides guidance for managers in understanding how these concepts can help them to facilitate forest ecosystem change and renewal adapt or self organize in the face of global change while still delivering the goods and services desired by humans The book takes a broad approach by covering a variety of forest biomes and the full range of management goals from timber production to forest restoration to promote the maintenance of biodiversity quality of water or carbon storage

Ecologies of Faith in a Digital Age Stephen D. Lowe, Mary E. Lowe, 2018-06-19 Many Christian institutions have embraced new technologies especially online education But is it possible for us to grow spiritually through our digital communities Steve Lowe and Mary Lowe longtime proponents of online education trace the motif of spiritual growth through Scripture and consider how students and professors alike might foster digital ecologies in which spiritual transformation can take place

The Ecology of Place Ian Billick, Mary V. Price, 2012-08-01 Ecologists can spend a lifetime researching a small patch of the earth studying the interactions between organisms and the environment and exploring the roles those interactions play in determining distribution abundance and evolutionary change With so few ecologists and so many systems to study generalizations are essential But how do you extrapolate knowledge about a well studied area and apply it elsewhere Through a range of original essays written by eminent ecologists and naturalists *The Ecology of Place* explores how place focused research yields exportable general knowledge as well as practical local knowledge and how society can facilitate ecological understanding by investing in field sites place centered databases interdisciplinary collaborations and field oriented education programs that emphasize natural history This unique patchwork of case study narratives philosophical musings and historical analyses is tied together with commentaries from editors Ian Billick and Mary Price that develop and synthesize common threads The result is a unique volume rich with all too rare insights into how science is actually done as told by scientists themselves

Ecological Orbits Lev Ginzburg,Mark Colyvan,2004-04-29 A famous ecologist and a philosopher of science team up to offer a fresh new approach to population biology and ecology Challenging the traditionally accepted Lotka Volterra model which is based on predator prey interactions this new model emphasizes maternal effects specifically the significance of a mother s interest in the success of her female offspring

The Migration Ecology of Birds Ian Newton,2010-08-04 This book presents an up to date detailed and thorough review of the most fascinating ecological findings of bird migration It deals with all aspects of this absorbing subject including the problems of navigation and vagrancy the timing and physiological control of migration the factors that limit their populations and more Author Ian Newton reveals the extraordinary adaptability of birds to the variable and changing conditions across the globe including current climate change This adventurous book places emphasis on ecological aspects which have received only scant attention in previous publications Overall the book provides the most thorough and in depth appraisal of current information available with abundant tables maps and diagrams and many new insights Written in a clear and readable style this book appeals not only to migration researchers in the field and Ornithologists but to anyone with an interest in this fascinating subject Hot ecological aspects include various types of bird movements including dispersal and nomadism and how they relate to food supplies and other external conditions Contains numerous tables maps and diagrams a glossary and a bibliography of more than 2 700 references Written by an active researcher with a distinguished career in avian ecology including migration research

Spatial Analysis Marie-Josée Fortin,Mark R. T. Dale,2005-04-21 The spatial and temporal dimensions of ecological phenomena have always been inherent in the conceptual framework of ecology but only recently have they been incorporated explicitly into ecological theory sampling design experimental design and models Statistical techniques for spatial analysis of ecological data are burgeoning and many ecologists are unfamiliar with what is available and how the techniques should be used correctly This book gives an overview of the wide range of spatial statistics

available to analyse ecological data and provides advice and guidance for graduate students and practising researchers who are either about to embark on spatial analysis in ecological studies or who have started but are unsure how to proceed Only a basic understanding of statistics is assumed and many schematic illustrations are given to complement or replace mathematical technicalities making the book accessible to ecologists wishing to enter this important and fast growing field for the first time
