Advancing Scientific Research in Education National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Research in Education, 2005-01-22 Transforming education into an evidence based field depends in no small part on a strong base of scientific knowledge to inform educational policy and practice Advancing Scientific Research in Education makes select recommendations for strengthening scientific education research and targets federal agencies professional associations and universities particularly schools of education to take the lead in advancing the field

Scientific Research in Education National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Scientific Principles for Education Research, 2002-04-28 Researchers historians and philosophers of science have debated the nature of scientific research in education for more than 100 years Recent enthusiasm for evidence based policy and practice in education now codified in the federal law that authorizes the bulk of elementary and secondary education programs have brought a new sense of urgency to understanding the ways in which the basic tenets of science manifest in the study of teaching learning and schooling Scientific Research in Education describes the similarities and differences between scientific inquiry in education and scientific inquiry in other fields and disciplines and provides a number of examples to illustrate these ideas Its main argument is that all scientific endeavors share a common set of principles and that each field including education research develops a specialization that accounts for the particulars of what is being studied The book also provides suggestions for how the federal government can best support high quality scientific research in education

The Research Mission of Higher Education Institutions outside the University Sector Svein Kyvik, Benedetto Lepori, 2010-06-08 Even if in most countries non university higher education institutions did not have originally a research mandate it is well known that in most cases these institutions have progressively developed research activities and at least in some countries the State now has recognized the research role of these institutions and provided support and funding Moreover in many countries the

role of research in polytechnics fachhochschulen hogescholen university colleges etc is on the political agenda Despite the importance of the issue there are very few in depth studies of research in the non university sector These studies show that the development of research in these institutions leads to quite complex interactions with universities both in the sense of convergence academic drift and or of differentiation of a specific research mandate oriented towards the regional economy Therefore this book aims to fill this gap by first analysing a number of transversal issues related to the research mission of these institutions In its second part it gives an overview of the state of the art in eight European countries
